## Social Security in Review

### The Labor Force in December

Despite some dislocations caused by the coal-mine shut-down, the economic system worked at or near full capacity in December. Nevertheless, business uncertainty about keeping future profit margins at present levels because of possible declines in inflated prices and increases in wages was reflected in the failure of stock prices to record their usual year-end rise.

The volume and composition of unemployment during December in industries covered by unemployment insurance were characteristic, for the most part, of high-level economic activity. With covered employment averaging 31 million, the State employment security agencies handled slightly more than 1.1 million claims each week as compared with about 1 million in November. These totals include not only compensable claims but likewise claims of workers who regained employment before they drew any benefits. A comparison of the numbers of initial and compensable claims suggests that almost one-third of the claimants either were re-employed before they served their waiting period or did not qualify for benefits because of insufficient wage credits or for other reasons (unavailability for work, disqualification from benefits, and so forth). The number of compensable claims averaged 840,000 per week in December. Thus, the load of claims filed with local offices represented approximately 3.5 percent, and totally unemployed beneficiaries about 2.5 percent, of the working force in covered establishments during an average pay period.

The variation during December in the weekly number of claims of different types, as reported by State agencies, is shown in the table in the adjoining column.

Apart from the repercussions of the coal strike (reflected mainly in the

upswing in initial claims) these weekly figures were affected also by the number of work days per week, declining in weeks with a holiday and increasing in the next week. Most of the unemployment during December con-

sisted of workers laid off in industries which suffer a seasonal lull in the winter, such as building construction, lumber, food preserving, and some branches of clothing industries. Contraction in building industries was comparatively mild this year, but layoffs were considerable in lumber industries in the West and in food industries all over the country. Shortages of raw materials in heavy industries and the stoppage of work in coal mining were additional sources of temporary unemployment. Moreover, the impact of the coal strike was felt mainly in the flow of initial claims in the first half of December. Most workers laid off because of that strike returned to work before their waiting period had expired.

The flow of benefit payments during December suggested that a beneficiary

Weekly number of claimants for unemployment benefits, August 4, 1945–December 28, 1946

would receive benefits for 8.0 to 8.5 weeks on the average, as in the 2 or 3 preceding months. Still shorter—approximately 6 weeks—was the average number of weeks in which individuals remained in claimant status during a spell of unemployment (including persons who filed initial claims but found jobs before the end of their waiting period). This estimate of benefit duration seems to indicate a fairly short average spell of individual unemployment. Since some workers who are laid off always have small chance of finding a suitable job and will receive benefits until they exhaust their benefit rights, the average duration of benefit payments of not more than 2 months per beneficiary proves that many persons returned to work less than a month after the termination of their last job.

In relation to covered employment, State insured unemployment—that is, unemployment for which an individual filed a waiting-period or compensable claim—averaged 3.2 percent in December in the country as a whole. The highest rate was recorded in the State of Washington (about 9 percent). The rate of insured unemployment was also comparatively high in California (about 6 percent). In New York the rate was only slightly above the national average, while Michigan and Pennsylvania reported

rates slightly below that average. By the end of December the situation was rather spotty. In many States, especially in New England and the Middle West, the main problem was still the shortage of labor. In other States, as in New York, Michigan, and Pennsylvania, the demand for labor and the supply of labor were approximately in balance, and similar conditions seemed to prevail in the country as a whole. However, in a few States, such as California, Oklahoma, and Washington, the insured unemployment rate was higher than would be expected, under favorable seasonal conditions, in an economy operated at full capacity.

#### November in Review

After an increase in October, claims and benefit payments under State unemployment insurance systems turned downward again in November, partly because industrial conditions stabilized in a few large States and also because of holidays and other administrative factors that affected the number of days on which claimants could report to file their claims. From 681,600 in October, initial claims went down to 620,000 in November, and continued claims dropped from 4.1 million to 3.5 million. This decrease in continued claims more than offset the October rise and brought those claims to the

lowest level since August 1945. Benefit payments, which totaled \$64.4 million in October, dropped to \$54.1 million in November. This amount, compensating for almost 3 million weeks of unemployment, went to a weekly average of 698,000 beneficiaries.

IN OLD-AGE AND SURVIVORS insurance, fewer monthly benefits were awarded in November than in any other month in 1946. The decline resulted partly from the provision in the 1946 amendments under which entitlement to primary benefits becomes retroactive for as much as 3 months for claims filed after 1946. A claimant who could have been entitled to primary benefits in October but did not file until November would lose his October benefit in that case. He was advised in such cases to defer filing his application until January 1947. At the end of the month, more than 1.6 million beneficiaries were receiving payments at a monthly rate of \$30.8 million. A year earlier, 1.3 million beneficiaries received \$23.2 million. Monthly benefits totaling \$68,600 and lump-sum payments of \$143,500 were certified during the month under the 1946 amendments to survivors of veterans of World War II.

IN PUBLIC ASSISTANCE, both the number of recipients and the amount disbursed in payments increased slightly; contributing factors in the rise were the seasonal increase in need and the additional funds made available under the 1946 amendments to the Social Security Act. Average payments for each of the special types of assistance were also higher than the October averages, although the average for general assistance declined slightly. Since the amendments became effective, 8 States have increased their average payments of old-age assistance, and 5 States their payments for aid to the blind, by \$5 or more, and 14 States have raised by more than \$3 their average per dependent child.

#### Arthur J. Altmeyer Appointed to UN Social Commission

Arthur J. Altmeyer, Commissioner for Social Security, has been appointed representative of the United States on the Social Commission of the

United Nations Social and Economic Council. The appointment, which is for a 2-year term, was announced by the White House on November 6 and later confirmed by the General Assembly of the United Nations and by the United States Senate. Mr. Altmeyer was also selected as one of nine members of the United Nations Staff Benefit Committee to advise on the development of a permanent retirement system for UN employees.

### *President's Messages on the State of the Union and on the Budget*

In his message on the state of the Union, presented to the Eightieth Congress on January 6, President Truman declared that the solution of labor-management difficulties—listed as the first of five major economic policies which he believes the Government should pursue during 1947—is to be found “not only in legislation dealing directly with labor relations, but also in a program designed to remove the causes of insecurity felt by many workers in our industrial society. In this connection, for example, the Congress should consider the extension and broadening of our social security system, better housing, a comprehensive national health program, and provision for a fair minimum wage.”

Of all our natural resources, the President said, “none is of more basic value than the health of our people. Over a year ago I presented to the Congress my views on a national health program. The Congress acted on several of the recommendations in this program—mental health, the health of mothers and children, and hospital construction. I urge this Congress to complete the work begun last year and to enact the most important recommendation of the program—to provide adequate medical care to all who need it, not as charity but on the basis of payments made by the beneficiaries of the program.

“One administrative change,” the President continued, “would help greatly to further our national program in the fields of health, education, and welfare. I again recommend the establishment of a well-integrated Department of Welfare.”

In discussing the program for veterans, Mr. Truman pointed out that, exclusive of mustering-out payments

and terminal-leave pay, the program for veterans of all wars is costing more than \$7 billion a year—one-fifth of our total Federal budget. “This is the most far-reaching and complete veterans’ program ever conceived by any nation. Except for minor adjustments, I believe that our program of benefits for veterans is now complete . . . History will judge us not by the money we spend, but by the further contribution we enable our veterans to make to their country. In considering any additional legislation that must be our criterion.”

The President’s budget for the fiscal year 1948, sent to Congress on January 10, included \$1,654 million for promoting the Nation’s social welfare, health, and security. In his accompanying message, Mr. Truman reiterated the need for extension of old-age and survivors insurance and unemployment insurance to groups now excluded and for liberalizing the present retirement benefits under the former program “to reduce the necessity for piecing out insurance benefits with public assistance payments.”

There is serious need, the message continued, “to correct inequalities between States in public assistance payments and to extend the scope of Federal aid to include general assistance programs.” Since the temporary increase in Federal grants for public assistance will expire December 31, 1947, Congress was urged to consider permanent legislation. The President also repeated his earlier recommendations for a national health program and for a Cabinet department of health, education, and social security.

### *President's Economic Report to Congress*

Immediate steps to revise benefit payments under the social security system, together with a long-range strengthening and extension of the program, were urged by President Truman in his Economic Report to Congress on January 8. The social security program, the report stated, “has not kept pace with the times or with our increase in general living standards.”

The President’s report was the first of a series of analyses and recommendations related to elements in a

national economic policy, to be made annually under the terms of the Employment Act of 1946. It was preceded in December by the first report of his three-member Council of Economic Advisers, also set up under the Employment Act to aid the Chief Executive in analyzing and interpreting economic developments, appraising programs and activities of the Government, and formulating and recommending national economic policy. The President’s report goes to a permanent joint committee of Congress, which, under the terms of the act as amended, must submit to both Houses of Congress by February 1 its findings and recommendations on each of the President’s main recommendations.

While his short-range recommendations have long-range significance as well, Mr. Truman pointed out that they merited immediate attention from Congress and the people as a whole, because of their influence on economic conditions in 1947. Among his proposals, the President listed immediate steps to revise benefit payments under the social security system as desirable in view of current economic trends. “The Congress has already authorized a temporary increase in public assistance benefits,” the report stated. “This legislation expires by the end of this year and new legislative action is required. Benefits under the old-age and survivors insurance system should also be adjusted. These measures are necessary to alleviate real hardship which has been aggravated by increases in the cost of living. Beyond that, adequate social security benefit payments provide a desirable support to mass purchasing power.”

The major part of the President’s recommendations centered on the long-range objectives of efficient utilization of the labor force; maximum utilization of productive resources; encouragement of free competitive enterprise; promoting welfare, health, and security; cooperation in international economic relations; and combating economic fluctuations.

Certain programs of Government which have come to be looked upon as “welfare programs” in a narrow sense and therefore insulated from the needs of the economy as a whole are

in fact, Mr. Truman declared, part of the problem of maximum employment, production, and purchasing power. The Employment Act presents the opportunity to abandon this insulation and to put these programs back in the economic setting from which they must draw their sustenance.

"Unemployment insurance is designed to take care of the unemployed as a matter of right rather than of charity," the report continued, "but it also provides purchasing power as a cushion against recessions, and its tax features are of general economic significance. Retirement and pension systems exist to take care of workers who have given of their years in factory, field, or office. But these systems, both on the income and outgo side, have a profound effect upon volumes of purchasing power, and the retirement age needs to be adjusted to the size and composition of our labor force and the trend of improved technologies. Health insurance relates clearly to the efficiency of workers and thus to the productivity of industry and agriculture. And this is even more true of education, which must be reshaped continuously to meet the changing demands and job opportunities of the machine age—or, some day, of the atomic age.

"The total amounts of public outlays for these and other purposes need to be measured against the total size of our economy—its wealth and resources today, and the trends and policies which shape its future." Many of these programs, the President said, were born of a "depression psychology," proceeding from the assumption of inescapable mass unemployment from time to time and the need to bring forward these other programs "to prime the pump or fill in the gaps. Here, too, we need a restatement. We should regard them rather as an inescapable obligation of an enlightened people, and we should expand them as our resources permit."

Turning specifically to social security, Mr. Truman pointed out that, though maximum employment would protect wage earners generally from the effects of prolonged mass unem-

ployment, the individual is still exposed to many hazards of economic insecurity. "Our social security program has not kept pace with the times, or with our increase in general living standards." Many individuals are not covered by the present provisions of the act, and the benefit payments to those covered are inadequate under today's conditions.

"I recommend that the Congress, cooperating with the States, take action that will lead to increasing the amount and duration of unemployment benefits. Present unemployment reserve funds are ample to support such increases." The President also recommended extension of old-age and survivors insurance to occupational groups not now covered and extension of the Federal Unemployment Tax Act to all employers of one or more workers in covered industries.

Lack of provision for compensating workers for loss of earnings from temporary or permanent disability, or against the costs of medical care, represents not only a heavy loss for the individual but a great waste of productive manpower, the President continued. He urged Congress to give early consideration to his recommendations, presented in a previous message, for a program which would spread the risks arising from sickness and disability by insuring workers against the loss of income and by providing, through social insurance, ready access to essential preventive and curative medical services.

"Our present social insurance system," the report went on to say, "is financed by employee and employer contributions. We must recognize, however, that the employees' contributions and the employers' pay-roll tax curtail mass purchasing power and increase businessmen's costs. From an economic point of view, it would be desirable to finance a part of the social security system out of the general budget. Therefore, I propose that the Congress, in working out a system of financing an expanded social security program, give full consideration to the economic as well as the social import of various

methods of taxation for this purpose."

Concerning public health and education programs, the report stressed the point that relatively small Government expenditures in these fields yield a high national dividend. "It is more economical to prepare people to earn a decent living than to care for them through relief. The Federal Government is now spending a large amount of money for health and education programs for war veterans, but general expenditures in these fields are relatively small. I urge the Congress to give early consideration to expanded peacetime programs of public health, nutrition, and education."

In connection with health and education and other programs in which the Federal Government makes grants-in-aid to State and local governments involving large amounts of money, the President said he had asked the Council of Economic Advisers to cooperate with the Bureau of the Budget and other Federal agencies concerned, and with State and local advisory committees, to undertake a study to determine "to what extent revised standards for the distribution of these grants may take into account more fully the needs for support that exist in various parts of the country." He also asserted that farm communities have never received comparable treatment with cities in such matters as education, housing, medical care, health, nutrition, and social security, and declared that Federal and State programs in these fields should give increasing attention to the needs of rural areas.

In discussing, in an earlier part of the report, the efficient utilization of the labor force, President Truman declared that the "return of the employment service to State administration should not result in its disintegration into 48 disconnected pieces, or in the subordination of the placement service to unemployment insurance. An efficient placement service requires uniform minimum standards and an integrated interstate system for disseminating job information and placing workers across State lines."

## Unemployment Insurance Goals—1947: Recommendations for Improving State Legislation\*

THIS IS THE FIRST TIME in 6 years that the majority of State legislatures will meet in regular session under peacetime conditions. When the last regular sessions of State legislatures were held in 1945, the country was still engaged in a two-front war. Efforts were made then to prepare the program for the postwar period, although few individuals anticipated how soon the war would be over. The changes made in State unemployment insurance laws in 1945 and 1946 on the whole were in the direction of providing workers, unemployed as a result of the change-over of the economy from war to peace, with more adequate protection during these periods of unemployment. It is to be hoped that, during the coming State legislative sessions, much will be done toward making the program still more effective in the period ahead.

### Role of Unemployment Insurance During Reconversion

The country was indeed fortunate in having a well-established unemployment insurance system available when large-scale lay-offs from war industries began immediately after the Japanese surrender. Most of the workers who lost their jobs during the reconversion period were protected by unemployment insurance. Veterans, too, had protection against unemployment in the readjustment allowances provided under the "GI Bill of Rights" when the armed forces began wholesale demobilization. The efforts made during the war period to maintain a stand-by organization and to prepare the program for the days ahead when the total economy would shift from a war to a peacetime basis have stood us in good stead.

Most of that shift has already taken place. Ten million veterans have been returned to civilian employment,

which is now higher than in wartime. Fifty-eight million persons were engaged in employment in August, close to 9 million above the number in the same month in 1940. Unemployment is fluctuating at a figure below the minimum considered possible in a free enterprise system.

In this transition from war to peace, unemployment insurance played a vital role. To the worker laid off at the termination of the war, it offered security in his search for a job that would utilize his highest skills. It gave him time to look around for a job which offered the promise for continuing to utilize his highest skills; thus he was not forced to take any job at any wages or suffer a complete cessation of income. To the employer, it offered the possibility of hiring the best qualified workers who, because they had some chance to choose a job,

gave the best promise of becoming permanent employees. To the community, it infused confidence and dispelled fear, the enemy of healthy business expansion. It thus provided for a better utilization of the labor force of the country so necessary for maximum production.

Millions of workers were laid off after V-day, with the abrupt cancellation of war contracts. Although workers had acquired rights to higher benefits than ever before because of high wartime wages, continuous employment, and improved benefit provisions of State laws, many of the individuals who lost their wartime jobs took peacetime employment without even filing a claim. Their rights to substantial unemployment benefits did not prevent them from taking other jobs immediately when they were available. For others, loss of wartime jobs did not mean immediate reemployment in a peacetime job. Even among the 8 million civilian workers who filed claims for benefits in the year since V-day, about one-third were reemployed during the

### TO: ALL STATE EMPLOYMENT SECURITY AGENCIES

I am enclosing herewith a statement, "Unemployment Insurance Goals—1947: Recommendations for Improving State Unemployment Insurance Legislation." This document emphasizes the broad areas to which we must give major attention now if the program is to have an important role in the years ahead. There is general agreement that State funds are more than sufficient at the present time for a more adequate program. The present period, therefore, provides a healthy environment for moving ahead and strengthening the State laws.

I know of no better system of protecting workers during their periods of unemployment between jobs than unemployment insurance. The system also helps to provide private enterprise with that economic setting so essential to its success. It can provide the community with assurance that other more costly and less desirable programs will not be needed.

It is important in our consideration of changes in the program that everything be done to make the program significant enough to protect the individual adequately over his period of unemployment. The program should also be administered as simply and economically as possible and should enlist the administrative support of as wide and varied groups in the community as possible. Only then can we achieve a widespread understanding of the role of unemployment insurance, its limitations and possibilities. Only by such understanding can the program perform its function in a democratic society . . .

Sincerely yours,

A. J. ALTMAYER  
Commissioner for Social Security.

\*Recommendations for improving State unemployment insurance provisions in the 1947 State legislative sessions, sent by the Social Security Administration to State employment security agencies.

waiting period and never drew a benefit check. The claimants who drew benefits remained on the rolls for about 11-12 weeks, far less than the duration of benefits to which they were entitled. In the week ended October 26, 1946, the 830,000 civilian unemployed workers who were drawing benefits represented only about 3 percent of the employed civilian covered workers. For the individuals who did continue to draw benefits, unemployment insurance performed a necessary function, not only for them but for society as a whole.

### *The Period Ahead*

We should not be lulled into a feeling of complacency about the future, however. It is true that employment is still high, and that shortage of workers today is the paramount manpower problem. Unemployment, we hope, will remain during the coming months at the low figure where it now is. But the necessary postwar adjustments of our economy have not all been made, and it may well be that 1947 will see those adjustments reflected in significant changes in production and employment. Under those circumstances, wisdom demands that we strengthen the program for both the immediate situation and the more distant future. Our experience has indicated that even in the period of a full-fledged war economy many people become unemployed for labor-market reasons. In a full-employment, peace economy with controls withdrawn, frictional unemployment will continue to exist and must be adequately compensated.

It is fortunate that we can face the period ahead with ample funds and with staff skilled in the administrative jobs that must be done. When the 1947 State legislative sessions convene, almost \$7 billion will probably have accumulated in the State unemployment funds. There is general agreement that these funds are sufficient for a more adequate program. There is every reason, therefore, why the States should examine their unemployment insurance programs now and make such changes as are desirable.

In the tasks that lie ahead, it will be the responsibility of the States, as expressed not only by Congress but by

representatives of the States themselves, to make the unemployment insurance program effective in the postwar period—effective for unemployed workers, for private enterprise, and for the community in general. The coverage of the laws should be extended to many workers not now included under unemployment insurance. Benefit rates must be increased in order to reflect the rise in weekly wages. Duration of benefits should be lengthened. No State yet provides for both a maximum weekly benefit of \$25 and a uniform duration of 26 weeks. The disqualification provisions need amendment in order that they not continue to nullify the purpose of the program, which is to compensate for involuntary unemployment. Consideration should be given to the payment of benefits to persons who have worked in covered employment and who, upon becoming unemployed, undertake training which will enhance their opportunity for employment. Administration should be simplified in order to expedite the payment of benefits, reduce the difficulties of employer reporting, increase the understanding of workers, and reduce administrative expenses. There needs to be a closer relationship between the administrative agencies and the beneficiaries of the program—workers, employers, and the public—if it is to continue to develop and meet the needs of the community. Only two States provide protection to workers when they are unemployed because of non-work-connected sickness or disability.

### *Coverage*

Regardless of the small amount of unemployment that exists at the moment, there still are millions of workers who, though potentially subject to the risk of unemployment, are without protection against it. Some of these individuals are now veterans who are protected by the readjustment allowance provisions of the GI Bill of Rights based wholly on military service. As they move into civilian employment not included in the unemployment insurance system, it will seem anomalous to them that they receive no protection during their periods of unemployment. Workers in small firms in many States, State and local government

employees, agricultural and domestic workers, and workers in nonprofit institutions are still without unemployment protection. There is general agreement that coverage should be extended to these groups. The States should give consideration to the significance of these groups in their total economy and extend the coverage of the system to as large a proportion of their wage-earning population as possible. A time of high-level employment is probably the best time for such action, instead of waiting until heavy unemployment besets the country and the unemployment insurance mechanism can be of little immediate aid for newly covered groups.

States which have not already done so should take advantage of recent congressional legislation permitting a State to cover maritime workers in private employment. Such employers are now subject to the Federal Unemployment Tax Act, while their employees are not entitled to any protection until covered by a State law. Some States, looking forward to possible extension of the Federal tax, have written provisions into their law which would automatically extend the coverage of their laws to any employment covered by the Federal Unemployment Tax Act. While States should continue to extend coverage beyond the limits of the Federal act, they might also include provision for the automatic extension of State coverage, in the event of extension of the Federal act.

### *Benefit Amount*

Under a system intended to compensate a certain fraction of wage loss, the benefits must constantly be examined in relation to changing wage patterns. Even with the changes that have been made, the weekly benefits provided under State laws have failed to keep pace with rising wage levels. Maximum benefits continue to limit the benefit rights of the great majority of claimants. In the first quarter of 1946, 70 percent of the claimants who established benefit rights were entitled to the maximum weekly payment. As a result, a large proportion of the workers drawing unemployment insurance are receiving less than half their previous earnings because of the limiting maximum

benefits. In that first quarter, average weekly benefits were less than 45 percent of average weekly earnings. In most States, in fact, the *maximum* weekly benefit is now less than half the *average* weekly earnings of covered workers. Only seven States now pay a maximum weekly benefit of \$25. If our unemployment insurance system is to maintain its role as a protector against a serious slump in living standards, the maximum should be raised to that level in the other States.

There are other ways of assuring the average worker a higher proportion of wage loss than he now receives. When the prices workers pay for basic necessities are rising markedly, a benefit pegged in relation to past wages decreases in adequacy, particularly for the worker with family obligations. If a worker without dependents requires 50 percent of wage loss as a safeguard against a drop in living standards, the worker with dependents needs a higher percentage.

The addition of dependents' allowances does not mean the abandonment of the wage-loss idea or the adoption of a "needs test" in unemployment insurance. Relating basic benefits to prior earnings assures claimants a minimum proportion of wages when they are unemployed and provides the flexibility necessary in a country with as wide a range in wages as the United States. By adding dependents' allowances we recognize the fact that the worker with a family must spend a higher proportion of his usual wages to buy food, pay his rent, and make the other purchases he cannot defer when he is unemployed. The addition of dependents' allowances is both a socially sound and an economical way to strengthen the program.

During the 1945 legislative sessions, Connecticut, Nevada, and Michigan joined the District of Columbia in increasing the weekly benefit for claimants with dependents, and in 1946 the Massachusetts Legislature added dependents' allowances to the law, effective April 1, 1947. Once the initial stages have been passed, the payment of dependents' allowances does not present any great administrative problems.

### *Duration of Benefits*

The extension of duration provisions made in the 1945-46 State legislative sessions, as well as high wartime earnings, has meant that the average worker could expect to receive benefits for about 20 weeks, in contrast to the average potential duration of about 13 or 14 weeks in 1941 and 1942.

Most of the improvements in the duration provisions of State laws have taken the form of increases in the maximum potential duration of benefits. In 1946, more than four-fifths of all covered workers were in the 34 States with a maximum duration of 20 weeks or more; under the 1940 laws, only 18 percent of all workers were in States with such provisions. In only one State can all insured workers receive benefits for as long as 26 weeks.

Only 14 States provide a uniform duration of benefits for all eligible workers. In the other States, potential duration of benefits is based on an individual's prior earnings and may be less than the maximum provided in the State law. In 21 States some eligible workers are still limited to less than 8 weeks of benefits. Because of high wartime earnings, not many workers would have qualified in the past year for such a short duration of benefits. In 2 States, however, no individual could receive benefits for as long as 16 weeks. As workers' annual earnings decline, moreover, the proportion with brief duration can be expected to increase markedly.

Even in the fiscal year 1945-46, more than a million workers exhausted their benefit rights. They represented about 40 percent of all beneficiaries. In some States more than half the claimants were still unemployed when they received their final check. This ratio varied from about 30 to 50 percent in most industrial States, where employment opportunities were good, and from about 50 to 80 percent in most agricultural States, where cessation of war activities left workers with few comparable job opportunities.

Despite the marked improvement in duration of benefits provided by State laws, each State law should provide 26 weeks' potential duration of benefits for every eligible claimant.

### *Disqualifications and Eligibility for Benefits*

Provisions for adequate benefits

can be defeated if the unemployment insurance laws contain unduly restrictive and unsound disqualification provisions. Although the trend toward severe disqualifications was curtailed during the State legislative sessions of 1945, many State laws still contain provisions which cancel or reduce a worker's benefit rights or postpone benefits unduly. Certainly every State law should contain provisions which disqualify a worker from receiving benefits if he leaves work voluntarily without good cause, if he loses his job through misconduct connected with his work, if he refuses suitable work without good cause, or if he is participating in a labor dispute. Such provisions are necessary to limit the risks covered by the program, but these provisions should not be viewed as penalties.

There is no place in the unemployment insurance program for imposing disqualifications for refusal of suitable work, voluntary leaving, and discharge for misconduct solely for punitive purposes. Disqualifications properly should prevent the payment of benefits for voluntary unemployment but never completely bar payments to eligible individuals who are involuntarily unemployed, able, willing, and available for work. Unemployment insurance should not be payable for periods of voluntary unemployment, but neither should it act to introduce rigidities in the system or hinder the free mobility of labor, especially in this period. Disqualifications might well be limited to a suspension of benefits for the weeks, up to 4 or 5, which immediately follow the act for which the individual is disqualified. Such suspensions are sufficient to deter workers from voluntarily becoming unemployed and to bar the compensation of voluntary unemployment. Cancellations or reductions in benefit rights, on the other hand, nullify the duration provisions and prevent the compensation of involuntary unemployment. By so doing they withdraw insurance protection from both business and workers and curtail the usefulness of unemployment compensation, particularly for the kind of economic period that is ahead. The administrators of the 26 State laws which contain provisions canceling all or part of a worker's benefit right for a disqualifying act

might well examine the decisions being made in the light of future problems and acceptable public policy.

In addition, good cause for leaving a job should not be limited to causes "attributable to the employer"; recognition should be given to good personal reasons. As long as the worker is available for work, good personal reasons for quitting a job are just as valid as reasons attributable to employers. The administrators of the 18 State laws containing such provisions should examine the implications of decisions they must make on mobility of labor, economic freedom of the individual, and compensation for involuntary unemployment. Disqualification provisions should not be used to prevent individuals from relocating in new communities or attempting to better themselves by trying for more desirable jobs.

Lastly, the special causes of disqualifications, such as disqualifications of women who get married, or because of pregnancy, which have been written into many State statutes, should be removed or modified so such cases could be handled by State administrative action, which appraises all the circumstances surrounding the individual case. While the elimination of such disqualifications from the statutes will increase the administrative burden on the State agencies, it will eliminate the inequitable treatment that now exists and will fulfill the function of compensating bona fide unemployment of individuals who are in fact able and willing to work and available for work.

In unemployment insurance a claimant's ability to work, availability for work, and refusal of suitable work are based on a weighing of various factors which are not always readily determinable and rest ultimately on sound, informed judgment. Yet a State agency in making these determinations must be certain that persons genuinely unemployed are declared eligible for benefits, and only persons who are not genuinely unemployed are declared ineligible. The fact that there are unfilled jobs in the community does not mean that workers should automatically be denied benefits. The existence of unfilled jobs while individuals are claiming

benefits is inevitable in a free enterprise system but does unquestionably present a situation that should be investigated to see if the characteristics of claimants match the specifications of the offered jobs. Where it is not possible to match jobs and applicants, unemployment insurance should perform its function of tiding workers over their periods of unemployment.

State agency concern about the phenomenon of unfilled jobs and claimants drawing benefits has recently taken the form of consideration of the extent to which claimants are "actively seeking work" on their own initiative. Translation of such concern into a general requirement that all claimants affirmatively establish that they are actively seeking work in addition to registering for work with the employment service would be administratively unwise since it provides too mechanical a measure of an individual's availability for work, which must be determined by a weighing of all the facts. Such a general requirement could easily result in rewarding the "chiseler" while punishing the unemployed individual who has canvassed the labor-market situation and knows about prospects for employment. Thus a claimant who persists in looking for work as a welder in areas where no welding is done is not proving his availability by his search for this type of work, nor is the claimant who knows that a plant where his skills are needed will open soon proving unavailability by the fact that he is not looking for other work. British experience with such a general requirement has proved that it not only fails to accomplish its purpose but places an unjustified burden on unemployed workers and on employers.

Some of the severe disqualification provisions have been included in State unemployment insurance laws because employers have questioned the reasonableness of having certain benefits charged to their accounts for experience-rating purposes. In some situations, the employer may in no way be responsible for the unemployment of a former worker who is entitled to benefits. For example, the last employer is not responsible if a worker had good personal reasons for a voluntary quit, nor is a base-period

employer responsible for the unemployment of a worker who has quit another employer, been disqualified, and still remains unemployed. Restrictive disqualification provisions are not necessary to prevent the charging of benefits paid under these and similar conditions. We have pointed out that all benefits need not be charged to employers' accounts provided that the benefits charged assure a reasonable measurement of an employer's experience with respect to the risk of unemployment. It is hoped that such policy will aid State agencies in reconsidering the disqualification provisions of their laws.

### *Payment of Benefits to Young People While Undertaking Training*

At the present time, the State laws require that a claimant for unemployment insurance must, in order to be eligible for benefits, be available for work. In the administration of this condition, State administrative authorities most commonly find that claimants who are full-time attendants at educational institutions are not available for referral to work and consequently are not entitled to benefits. Therefore, claimants who might otherwise undertake special training or return to school because they have little likelihood of finding jobs with the skills they now have may be deterred from doing so because benefits would be withheld for the weeks of school attendance. In the interest of promoting greater training in order to enhance opportunities for employment, States might give consideration to amending their laws or revising their administrative practices to permit the payment of benefits if, though attending training, the individual is available for work and does not refuse suitable work without good cause. In such cases, the factors to be considered in determining whether the individual has good cause for refusing work should include consideration of whether the training will enable the individual to obtain work at a higher skill.

### *Administrative Simplifications*

One of the primary concerns during this period should be the simplifica-

tion of procedures to reduce reporting burdens on employers, to expedite payment, and to promote public understanding. It will be important not only that benefits be adequate but that they be paid promptly. Much has already been done, but there is ample room for continued improvement if the program is to maintain the confidence and understanding of the public. One of the procedures that might aid greatly in the expeditious payment of benefits would be decentralization of benefit payments to local offices. Thirty-four States have already operated with some decentralization of the benefit-determination function, and other States have been studying similar plans.

Employers, especially large interstate employers, have complained about the burdens of variations in the forms used by State agencies for similar procedures—variations in reporting wages and contributions, in low-earnings reports, and separation reports. Elimination of any reports where feasible and simplification and uniformity where possible can relieve employers of unnecessary burdens. Additional simplifications can be made by eliminating the use of benefit payments in the formula for experience rating.

Good administration encompasses something more than the kind of organization and the kind of procedures that are established. It is the spirit and understanding of those who make up the organization and who carry out the procedures that count.

Each State agency must constantly review its law and procedures so that it can recommend changes to improve the administration of its law. Each State law should be written and administered so that the State agency can assume the initiative all along the line. It must make certain that employers do not avoid their obligations to pay contributions and that workers do not mulct the fund. It cannot sit back waiting for cases of dereliction to be brought to its attention, nor can it sit back expecting unemployed workers to know their rights and take advantage of them. It must remember at all times that it has an affirmative obligation to make certain that unemployment insurance is paid promptly and fully to workers

involuntarily unemployed and only to such workers.

### *Relations With Employer, Labor, and Public Groups*

In administering the unemployment insurance system, we must constantly strive to adjust the program to meet new problems as they arise. These problems cannot be solved simply on the basis of technical knowledge. They involve a realistic appraisal of social and economic factors. They involve assumptions as to the basic purposes of the law. They must take into account group attitudes and public opinion. That is why it is desirable for the State agency to work closely with an advisory council representing employers, employees, and members of the public, including outstanding citizens and persons versed in labor relations, social welfare, and related matters. Out of this discussion between the technicians of the State agency on the one hand and the advisory groups on the other can come the sound social judgment that is so essential to a social program such as unemployment insurance. The experience in most of the States that have used advisory councils has shown that they can be helpful in the progressive improvement of the program and in the development of community understanding of the complex issues involved in unemployment insurance.

In hearing appeals on claims denials, appeals tribunals composed of employers and employees perform a similar function. States which have no provision for the use of tripartite appeals boards should give consideration to the adoption of an amendment which would permit the use of such boards. While most appeals can be handled satisfactorily by referees, there are cases, especially cases which may set precedents, which involve grave and complicated issues of employer-employee relationships and which need the considered opinion of representatives of workers and employers as well as the judgment of an impartial representative. Such boards have been found effective in the administration of labor laws in many States; they bring the experience of labor and management to the settlement of the issues, and protect the agency from charges of arbitrariness in handling the issues.

### *Temporary Disability*

With a strengthened unemployment insurance system and an organization experienced in administering the unemployment insurance program, the States might well expand their social insurance protection by providing for a system of cash benefits to individuals when they are sick or temporarily disabled.

It makes little difference to workers, in terms of wage loss, whether they are unemployed because of lack of work or because of illness. As a matter of fact, the latter contingency places a double burden on workers because it results not only in cessation of earnings but in medical costs. Yet at the present time most industrial workers are protected against the former contingency and not the latter. Already two States, Rhode Island and California, have enacted temporary disability insurance laws in which the same State agency administering the unemployment insurance program is administering the temporary disability insurance program. Such an arrangement permits the use of a single set of wage records for determining benefit rights under both programs, results in greater efficiency of operations, and reduces total administrative costs. Other States are seriously considering enactment of similar laws.

Congress recently enacted legislation including benefits for temporary disability under the railroad unemployment insurance program. Congress also provided an inducement to State action in this area by permitting States to withdraw, for temporary disability insurance purposes, employee contributions they had deposited in the unemployment trust fund. Since the beginning of the program nine States—Alabama, California, Indiana, Kentucky, Louisiana, Massachusetts, New Hampshire, New Jersey, and Rhode Island—have collected employee contributions, some of them in substantial amounts. These employee contributions might well form the financial basis for embarking on systems of temporary disability insurance, since withdrawal of such employee contributions will not endanger the solvency of the State unemployment funds.

In 1945, the Social Security Board

issued a document entitled "Some Provisional Notes on a Program of Temporary Disability Compensation Administered by a State Employment Security Agency," and this document is now being revised to take account of new developments. The Social Security Administration stands ready to lend every assistance in formulating a sound program of temporary disability insurance and in developing an administration integrated with unemployment insurance.

### Conclusion

The next sessions of the State legis-

latures will probably convene at a time when employment is at high levels and unemployment remains low. However, major economic adjustments may occur within the next few years. Whether they take the form of a slight or a more severe recession we do not yet know. The task ahead, however, is to prepare the program for its maximum contribution to the maintenance of high-level employment in a free democratic society, through broadening its coverage and providing adequate benefits to individuals when they are unemployed because of lack of work or illness.

## Recent State Legislation Concerning Prepayment Medical Care

By Margaret C. Klem\*

*In this study of State legislation in the field of voluntary prepayment medical care plans, the author points out the characteristic pattern followed in recent laws. As in all Bulletin articles, the opinions expressed are those of the author and do not necessarily reflect official views of the Social Security Administration.*

DURING THE PAST few years the increasing public interest in problems of medical economics has been expressed many times through legislation, either proposed or enacted, at both national and State levels.

On the national scene the Wagner-Murray-Dingell bill, which provides for personal health service on a compulsory insurance basis, has aroused most interest. The Senate hearings on the bill, which ran from April to mid-July of last year, brought together testimony from many of the Nation's most eminent authorities on the medical, economic, and social aspects of health problems.

State legislation has also assumed much importance during this period. Many States have made provisions for committees to study various aspects of personal health services, such as medical facilities, expenditures for medical care, and the need for more

adequate services to all or to certain groups of the State's population. Since 1943 alone, health commissions to inquire into the problems of medical care have been established through legislative action in nine States—California, Illinois, Maryland, New York, North Carolina, Rhode Island, South Carolina, Virginia, and West Virginia. Commissions have also been appointed, although not specifically authorized by legislative acts, in Alabama, Colorado, and Florida.

State interest in health matters is further evidenced by the fact that by February 1946, 18 months after the Commission on Hospital Care was set up by the American Hospital Association in cooperation with the Government, all 48 States and the District of Columbia had made plans for or were conducting State-wide hospital surveys. On January 31, 1946, studies were in progress in 31 States and the District of Columbia; 2 additional States had completed preliminary studies; studies had been authorized but not started in 8 States; and the other 7 were forming study groups.<sup>1</sup>

The Commission on Hospital Care,

inaugurated to study the Nation's hospital facilities, has been helping the States in their surveys. To assist the Commission in its work, the U. S. Public Health Service has made technical personnel and physical facilities available to the staff. State health departments have given assistance and in some instances are actually conducting the studies. The introduction in January 1945 of the Hill-Burton bill, which authorized Federal grants to States for surveying hospital needs and for constructing hospitals and public health centers, and the hearings that followed gave great importance to the studies. This bill was enacted by the Seventy-ninth Congress as the Hospital Survey and Construction Act and was approved August 13, 1946.

### Nonprofit Medical Care Plans

Although all State legislation relating to medical problems is of interest to those who want to improve health conditions, one aspect is of particular concern to everyone interested in prepayment plans. Physicians, labor unions, industries, and various consumer groups who are sponsoring or hope to establish such plans will find significant implications in legislation which specifically authorizes the establishment and control of prepayment medical care organizations.

To date, 29 States have enacted laws dealing with medical service plans. More than half these laws were enacted during 1945 and the early part of 1946, when 15 States<sup>2</sup> passed such laws for the first time and 5 States<sup>3</sup> amended or reenacted legislation already in force. Thirty-six States have also passed laws regarding nonprofit hospital service plans.

### Medical Participation

Recent legislation on voluntary nonprofit prepayment medical care plans is particularly significant from one aspect—the provisions made for participation by physicians. The 15 States recently enacting new laws for the regulation of these plans have followed the precedent set by such States

\*Chief, Medical Economics Section, Division of Health and Disability Studies, Bureau of Research and Statistics. This article is based on addresses presented at a Conference on Rural Medical Care, Purdue University, August 1, 1946, and the National Conference on Cooperative Health Plans, Two Harbors, Minn., August 17, 1946.

<sup>1</sup> Hospital Survey News Letter, February 1946, p. 4.

<sup>2</sup> Alabama, Arizona, Florida, Illinois, Iowa, Kansas, Kentucky, Maryland, Minnesota, Mississippi, North Dakota, Rhode Island, Tennessee, Texas, and Wisconsin.

<sup>3</sup> Connecticut, New Hampshire, New Jersey, New York, and West Virginia.

as New Jersey, Ohio, and Pennsylvania, where the legislation was formulated along lines demanded by medical society groups. In most of these 15 States, under the present laws, the future of prepaid medical care will be largely in the hands of the medical profession, as it is now in New Jersey, Ohio, and Pennsylvania, to the exclusion of other nonprofit or profit organizations or groups.

This type of legislation has been

sponsored by medical societies or by persons interested in prepayment medical care programs similar to those now operated by many State medical societies. Individuals or groups who are interested in other types of prepayment programs must either seek to have such acts amended or must sponsor other legislation.<sup>4</sup>

<sup>4</sup>No attempt has been made to study other types of legislation in the various States under which such plans can be or-

ganized, such as the laws authorizing the formation of cooperatives and nonprofit organizations.

ganized, such as the laws authorizing the formation of cooperatives and nonprofit organizations.

Table 1.—State legislation regarding nonprofit medical care corporations enacted before 1945 in selected States

State and legislation enacted	Purpose	Who may incorporate	Administrator of corporation	Scope of services	Source of services	Legal jurisdiction	Tax exemptions and other significant provisions
Massachusetts (Ann. Laws, Cum. Suppl. 1942, c. 176B). Approved: 1941.	Provides for formation of medical service corporations to preserve public health by furnishing services at low cost.	Seven or more persons, in manner specified.	Board of directors approved by a medical society incorporated not less than 10 years and having not less than 2,000 physicians as members; at least one-third of directors must be subscribers to plan.	Services provided by registered physicians in accordance with accepted practices in the local community. Any person residing in the Commonwealth may subscribe if he meets corporation's qualifications.	Every registered physician in area where corporation operates has a right to participate. Subscriber has free choice of participating physicians.	Commissioner of Insurance.	Corporations are exempt from provisions of insurance laws, except as especially provided, and from taxes, except as provided. Salaries limited to \$5,000 annually.
(Ann. Laws, Cum. Suppl. 1942, c. 176C). Approved: 1941.	Provides for medical service corporation or medical organization operating in connection with a medical service plan. Exempts such corporations operating under chapter from provisions of chapter 112 relating to practice of medicine.	Medical service corporations endorsed by the Department of Public Health and Commissioner of Public Welfare.	Board of directors with not less than 9 members, of whom at least 3 and not more than a third shall be subscribing members of corporation, and at least 3 and not more than a third physicians who are members of the Massachusetts Medical Society or other recognized association of physicians and who are not associated with physicians of the medical service plan. Any person in Commonwealth who meets qualifications specified in bylaws may become a subscribing member.	Corporation shall not provide medical services but may contract for them with medical organizations composed of at least 5 physicians. Corporations may pay a stipulated percentage of subscriptions or other receipts; specified amounts shall not be paid whether or not based on number of services.	Every registered physician complying with qualifications of medical organization conducting business in community has a right to become an associate member of organization.	Commissioner of Insurance and Commissioner of Public Health.	Corporations are exempt from provisions of insurance laws and from taxes except as provided. Salaries limited to \$5,000 annually.
New Jersey (Rev. Stat., Cum. Suppl. 1941, sec. 17: 48A-1 to 17: 48A-25). Approved: 1940. Amended: 1944 and 1946.	Provides for medical nonprofit service corporations and limits operation of medical service plans to those corporations except when authority is granted by the Commissioner of Banking and Insurance or in the case of medical services under workmen's compensation.	Nonprofit corporations without capital stock. 51 percent of the physicians in area must agree to participate in plan.	Board of trustees. No person can be approved as trustee unless approved by a recognized medical society or a professional organization having not less than 2,000 members licensed to practice medicine and surgery.	All general and special medical and surgical services ordinarily provided by physicians in accordance with accepted practices in community at time services are rendered. Cash indemnity benefits will not be paid except for medical services for which corporation was liable at time of such payment. Contracts can cover only one person and dependents. Under certain circumstances subscriber may be charged additional sum by participating physicians.	Licensed physicians in New Jersey who agree to participate.	Commissioner of Banking and Insurance.	Corporations are tax exempt. Organization must have unencumbered funds of not less than \$5,000.

Table 1.—State legislation regarding nonprofit medical care corporations enacted before 1945 in selected States—Continued

State and legislation enacted	Purpose	Who may incorporate	Administrator of corporation	Scope of services	Source of services	Legal jurisdiction	Tax exemptions and other significant provisions
Ohio Gen. Code (Page, Cum. Suppl., 1942) sec. 669-14 to 669-38. Approved: 1941.	Authorizes nonprofit corporations to operate voluntary nonprofit medical care plans.	Nonprofit plans providing medical services. At least 51 percent of physicians and surgeons practicing in each county where plan operates must participate. Certificates will not be issued until written agreements have been signed with at least 10 physicians.	Fifteen-member board of trustees, representing the public and the medical profession; at least 6 public representatives.	Professional services by physicians and surgeons in office, hospitals, and homes; hospitalization not included. Contracts cannot be issued to persons without dependents and with income exceeding \$900 during 6 preceding months, or persons having dependents whose income exceeded \$1,200 during preceding 6 months' period.	Licensed physicians and surgeons in State who reside in area of operation and who comply with corporations' requirements; subscribers have free choice of physician.	Superintendent of Insurance.	Corporations are taxed the same as domestic insurance companies and are entitled to the same exemptions. Employees of State or political subdivisions or any institution supported by State, may authorize deductions from salaries.
Pennsylvania (Acts 398 and 399). Approved: 1939. Amended: 1943.	Provides for nonprofit medical service plans.	Nine or more persons, residents of Pennsylvania, majority physicians.	Nine persons, residents of Pennsylvania, majority physicians. All questions involving professional ethics to be decided only by physicians selected in accordance with bylaws of corporation.	Medical services (not cash) for persons of low income and their dependents as follows: Person with one dependent whose income for preceding 25 weeks averaged not more than \$30 weekly or whose income with dependent's averaged not more than \$45; persons with more than one dependent whose income with incomes of all dependents averaged not more than \$60 during 25-week period. All persons of low income entitled to apply for membership. Persons with higher incomes may become members with understanding that physicians may make extra charge for services.	Every physician practicing in area served who complies with regulations of the corporation and who registers with corporation. Corporation, with approval of Department of Health, may refuse to place doctor's name on the register.	Department of Health and Insurance Department. Secretary of Health may order corporation to extend or improve services if they are not adequate.	Corporations are tax exempt. Minimum reserve of \$25,000 required.

type of organization, provides for the formation of medical service corporations to be managed by boards of directors composed of persons approved by a medical society which has been incorporated for at least 10 years and has not less than 2,000 members; not less than one-third of the directors must be subscribers to the medical care plan. The second act, sponsored by those who favored a plan that would not give a monopoly to medical societies, provides for the formation of medical service corporations, approved by the Department of Public Health and managed by boards of directors with not less than 9 members, of whom at least 3 but not more than a third are subscribing members, and at least 3 but not more than a third are physicians who are members of the Massachusetts Medical Society or of some other recognized association of physicians. Both laws are on the statute books.

Eleven of the 15 States recently en-

acting legislation have made definite provisions for medical supervision and participation. Illinois and Tennessee specify that a certain number of citizens (7 in one State and 9 in the other) may incorporate, but the majority must be physicians. Moreover, before plans in these States are approved, proof must be given that the majority of the physicians in the area of operation are willing to participate.

The Minnesota act states that not less than 21 persons, all doctors of medicine, may incorporate. Wisconsin legislation provides for the incorporation of plans by the State medical society or by county medical societies having State medical society approval. Alabama has amended State hospital legislation to permit hospitals which have been approved by the State hospital and medical associations to provide medical services.

Legislation in Rhode Island provides for double approval—by the Governor, who must certify that the

plan is a public convenience, and by the State medical society, which must give approval before a plan may incorporate.

While the Kentucky law does not specify the type of persons who may incorporate, it requires that at least 51 percent of the physicians in the area of operation must signify their willingness to provide services before a certificate of incorporation will be granted. Neither Iowa nor Kansas made any special regulations about incorporation, but the former requires that 150 physicians must participate in any plan, and the latter specifies 50.

Both Florida and North Dakota, while giving latitude for the types of plans that may be incorporated, specify that the plans must be managed by boards of directors, the majority of whom are physicians.

#### Other Aspects

**Boards of directors.**—The regulations regarding boards of directors in-

Table 2.—State legislation regarding nonprofit medical care corporations enacted during 1945 and early 1946

State and legislation enacted	Purpose	Who may incorporate	Administrator of corporation	Scope of services	Source of services	Legal jurisdiction	Tax exemptions and other significant provisions
Alabama (Governor's Act No. 50, Acts 1945). Approved: June 1, 1945.	Amends existing nonprofit hospital legislation.	Representatives of 2 or more hospitals approved by the Alabama Hospital Association.	Board of trustees. Representatives of participating hospitals entitled to membership. Physicians may be elected.	Hospital services, which may include medical and/or surgical and/or obstetrical care or benefits.	Any member of county medical association selected by patient.	Superintendent of Insurance.	Previous legislation (1939) grants tax exemption.
Arizona (Ch. 13, Laws 1945). Approved: Oct. 3, 1945.	Provides for organization, regulation, operation, and taxation of nonprofit hospital and medical service corporations.	Any organization not inconsistent with the provisions of the act.	Board which includes representatives of participating physicians, hospitals, and the general public.	Hospital or medical service or a combination of the two.	Licensed physicians (or hospitals) with whom organization enters into contract. Patient has free choice of participants.	State Corporation Commission.	Corporations are exempt from all but general property tax. Organizations must have deposit of \$5,000-10,000 with State Treasurer. Salaries limited to \$5,000 annually unless approved by board of directors.
Connecticut (Special Act No. 284, Laws 1945). Approved: July 23, 1945.	Authorizes the Connecticut Hospital Service Association to act as agent for medical service corporations organized under existing legislation.						
Florida (House Bill No. 883). Approved: June 11, 1945.	Provides for and regulates nonprofit medical and/or surgical and/or hospital service plans.	Five or more persons.	Board which includes representatives of participating physicians, hospitals, and the general public; majority physicians.	Medical and/or surgical and/or hospital services.	Licensed physicians and approved hospitals with whom organization enters into contract.	Insurance Commissioner.	Corporations are exempt from all provisions of insurance laws and all other laws conflicting with act. Pre-existing plans need not incorporate or reincorporate but must file an acceptance of the act.
Illinois (Senate Bill No. 652). Approved: July 25, 1945.	Provides for incorporation, supervision, regulation, and dissolution of medical service plan corporations.	Seven or more persons, all residents of Illinois, majority physicians. Majority of physicians in county must participate.	Board of directors with same general qualifications as incorporators.	Ordinary and usual medical professional services; no hospitalization.	Any licensed physician in good standing in county is eligible to participate.	Insurance Director.	Corporations are exempt from all taxes and license fees from which charitable and benevolent corporations are exempt. Must have working capital of \$5,000.
Iowa (Senate Bill No. 128). Approved: Feb. 15, 1945.	Amends laws relating to nonprofit hospital service and authorizes nonprofit corporation to furnish medical and surgical services.	Corporations organized to establish, maintain, and operate a plan providing medical and surgical service.	Board of at least 9 members, majority physicians.	Medical and surgical services.	Licensed physicians in community; at least 150 must participate.	Commissioner of Insurance.	Corporations are tax exempt.
Kansas (House Bill No. 80). Approved: Mar. 29, 1945.	Prescribes certain powers and duties and provides for supervision of nonprofit medical service corporations.	Corporations must have contracts with at least 50 participating physicians.	Board of directors with 2 public representatives appointed by Governor.	Medical services of such types as corporation desires.	Licensed physicians; at least 50 must participate.	Commissioner of Insurance.	Corporations are tax exempt. Plans must have assets of at least \$5,000.
Kentucky (House Bill No. 171). Approved: Mar. 23, 1946.	Provides for the incorporation and regulation of nonprofit medical service plans.	Corporations with at least 51 percent of licensed physicians in county participating in providing services.	Not specified.....	General and usual services rendered by physicians.	Every licensed physician in county has a right to participate.	Insurance Director and State Board of Health.	Corporations are exempt from insurance laws except as specifically provided. A \$10,000 security must be deposited with the Custodian of Insurance Securities.
Maryland (Ch. No. 752). Approved: Apr. 27, 1945.	Repeals and re-enacts, with amendments, nonprofit hospital legislation to provide for nonprofit health plans.	Corporations, without capital stock, organized to provide health services.	Not specified.....	Hospital, medical, or dental care provided by hospitals, physicians, and/or dentists.	Licensed physicians, dentists, or hospitals having contracts with corporation.	Insurance Commissioner.	Corporations are exempt from insurance laws unless expressly designated. Must have a working capital sufficient for 3 months' operation.

cluded in recent legislation are of particular interest not only to organizers of plans but to the general public—especially the beneficiaries of such plans. Six States—Florida, Illinois, Iowa, North Dakota, Rhode Island, and Tennessee—specify that the majority of the board members must be physicians; only Arizona, Florida, and Kansas mention representation of the subscribers.

Odin Anderson, in his study of State enabling legislation in 1944, observed that control over policies and operations of voluntary plans was definitely placed in the hands of the hospital officials (for hospital plans) and of the medical profession (for medical plans), subject to the decisions of the commissioner of insurance; the subscriber has little or no voice except

through sales resistance or organized appeals to the commissioner of insurance. "Whether the representation of the public on the boards of directors is desirable or not is a very debatable issue," Mr. Anderson declares.<sup>5</sup> "It may be said, however, that if the nonprofit plans regard themselves as public service institutions sponsored by the community, it follows that representatives of the community at large should have a voice in policy making, perhaps even a dominant voice; if the plans regard themselves as simply another insurance company, it follows according to

<sup>5</sup> Anderson, Odin W., *State Enabling Legislation for Nonprofit Hospital and Medical Plans, 1944*, Public Health Economics Research Series No. 1, University of Michigan, Ann Arbor, 1944, 56 pp.

precedent that the community should have no more voice in the policy making than it has at present in the operation of commercial insurance companies."

*Legal supervision of plans.*—Legislation in almost all States places voluntary plans under the direction of the State insurance commissioner, whose power over them varies considerably. In some instances it extends far beyond what would ordinarily be expected, permitting him to determine whether the plan duplicates services already provided, to limit the area of operation, and to determine the amount of funds to be spent for administration or for solicitation.

The Tennessee law, passed in 1945, gives the commissioner jurisdiction over rates, approval of hospitals,

Table 2.—State legislation regarding nonprofit medical care corporations enacted during 1945 and early 1946—Continued

State and legislation enacted	Purpose	Who may incorporate	Administrator of corporation	Scope of services	Source of services	Legal jurisdiction	Tax exemptions and other significant provisions
Minnesota (Ch. No. 255). Approved: Apr. 12, 1945.	Provides for the incorporation and regulation of nonprofit medical service plans.	Not less than 21 doctors licensed under State laws and legal residents of State.	Not specified.....	Medical services, no cash indemnification of subscriber.	Patient selects physician; physician-corporation contracts prohibited.	Commissioner of Insurance and Secretary of State.	Corporations are exempt from insurance laws of State except as specifically provided. Must have at least \$25,000 capital.
Mississippi (House Bill No. 712). Approved: Apr. 10, 1946.	Provides for incorporation of medical, surgical, and other corporations organized to improve physical, mental, and moral conditions of mankind.	Three members of organization. Organizations may operate on share or nonshare basis. Nonprofit organizations shall not be required to publish charter and shall issue no stock.	Not specified.....	Medical and surgical benefits as well as other social programs.	Not specified.....	Secretary of State and Attorney General.	
New Hampshire (Ch. No. 96). Approved: Apr. 5, 1945.	Amends previous medical service legislation.	Organization with 50 percent or more of the eligible physicians in State, or area of operation participating.					
New Jersey (Ch. 259) Approved: May 2, 1946.	Amends previous act affecting medical services to permit corporations to receive grants from government agencies or other sources for payment of medical and hospital services.						
New York (Ch. 543) Approved: Apr. 5, 1946.	Amends insurance membership corporation and co-operative laws relating to nonprofit medical and dental indemnity and hospital service corporations to permit organizations under these laws to furnish medical, dental, and hospital service benefits.	Membership corporation and consumer co-operatives.		Medical, dental, and hospital benefits.			

scope of services to be offered, and conditions under which a doctor may be paid as a specialist; he has no professional advisory body, and the law is so worded as to allow appeal from his decisions only on points of law, not of fact.

*Special privileges conferred by enabling legislation.*—Most recent legislation has continued the pattern set in earlier acts by declaring nonprofit corporations to be charitable and

benevolent institutions and making them tax exempt. The notable exception is the Tennessee act, which declares that the corporations are subject to fees and taxes as prescribed for life, health, and accident insurance companies, as it is not the purpose of the act to discriminate in favor of medical service corporations. In most States, also, medical care prepayment plans are allowed to operate without large reserves.

These exemptions raise an interesting question concerning the place of nonprofit plans in relation to commercial insurance. By declaring the plans charitable and benevolent and exempting them from the regular insurance laws and from the necessity of maintaining large reserves, the States are endowing them with certain privileges, in return for which the people have a right to expect a more comprehensive type of benefit

Table 2.—State legislation regarding nonprofit medical care corporations enacted during 1945 and early 1946—Continued

State and legislation enacted	Purpose	Who may incorporate	Administrator of corporation	Scope of services	Source of services	Legal jurisdiction	Tax exemptions and other significant provisions
North Dakota (Ch. 154) Approved: Feb. 28, 1945.	To promote public health and bring about a wider distribution of medical care through nonprofit medical service corporations.	No particular specifications.	Board of at least 9 members, majority participating physicians.	Usual services rendered by physicians.	Every licensed physician in State has a right to participate.	Commissioner of Insurance.	Corporations are tax exempt; law governing charitable and benevolent organizations applicable.
Rhode Island (House Bill No. 836) Approved: Apr. 24, 1945.	Provides for incorporation of nonprofit medical service corporations.	Organizations approved by Governor and State medical society. Hospital corporations may amend charters to provide medical care.	Board of directors, majority licensed physicians.	Medical services, drugs, medicines, supplies, and nursing care; indemnity benefits may be provided.	Not specified.....	Director of Business Regulation.	Corporations are exempt from insurance laws.
Tennessee (Ch. 113) Approved: Feb. 27, 1945.	Authorizes the organization and operation of medical service corporations.	Nine citizens, majority doctors licensed in Tennessee. Fifty-one percent of doctors in county must participate. Corporation must not duplicate services already provided.	Board of directors, possessing same general qualifications as incorporators.	Either general or special medical benefits or both.	Every practicing doctor in good standing in the county is eligible to participate.	Insurance Commissioner.	Corporations are subject to fees and taxes as prescribed for life, health, and accident insurance. Must have 6 months' working capital or \$2,500, whichever is larger.
Texas (Senate Bill No. 181) Approved: Apr. 10, 1945.	Amends civil statutes (article 1302, title 32) to provide for creating and operating charitable corporations to own and operate nonprofit cooperative hospitals and to provide medical, dental, health, surgical, nursing, and related services and benefits for members and families of members.	Corporations cannot operate where population is more than 2,500.	-----	See Purpose.....	Not specified.....	-----	-----
West Virginia (Senate Bill No. 3-X) Approved: Mar. 28, 1946.	Amends and re-enacts previous legislation to encourage expansion of hospital and medical services.	Nonprofit, non-stock hospital or medical service organizations.	Not specified.....	Medical and surgical services by physicians; hospitalization.	Physicians and hospitals with whom corporation has contracts.	Insurance Commissioner.	Corporations are exempt from taxes and general insurance laws of State. Must have sufficient working capital to pay expenses for a reasonable period. Dues may be deducted from State government's pay rolls.
Wisconsin (Ch. 494) Approved: July 19, 1945.	Amends statutes and provides for care during sickness by State medical society.	State society, or county society in manner approved by State society, may establish plans.	Not specified.....	Sickness care of indigents, low-income groups, and others.	Participating physicians; subscribers have free choice of physician.	Commissioner of Insurance.	Corporation is exempt from State insurance laws except those relating to nondiscriminatory rates, investments, and premium reserves, as specified.

than the commercial insurance companies can provide at similar rates. Since the majority of the subscribers to medical society plans receive care for catastrophic illness only—a benefit quite similar to that provided by the average insurance company—the development of prepayment plans along these lines has been ground for causing both the general public and the commercial companies to question the right of these organizations to special privileges.

### *Effect on Development of Plans and on Medical Services*

The effect of recent legislation, both on the types of plans contemplated under this enabling legislation and on the types of services that will be provided, will be obvious to those familiar with prepayment medical care plans. Most of these State plans will either be operated directly by State or county medical societies (or by organizations which they establish and control) or will follow such patterns as they prescribe.

The medical services afforded will provide the type of care now being given by medical society plans, which operate on the principle that the public is primarily interested in protecting itself against the costs of particular classes of catastrophic illness. Only a very small percentage of the membership in plans of this type now in operation is eligible for more than surgical, and in some instances medical, care (including obstetrical care) when hospitalized. Preventive care and care early in the course of illness, therefore, have largely been excluded. Services in most medical society plans may be provided by any licensed physician in the area who chooses to participate in the plan and who agrees to care for beneficiaries on a fee-for-service basis; the plan pays full or partial remuneration for services.<sup>6</sup>

Since the laws provide that all or a

<sup>6</sup> Full or partial payment depends on several factors. In medical society plans, physicians are paid by the plan according to a specified fee schedule, if funds are ample. If the plan cannot meet the physicians' bills in full, they are prorated. Some plans provide that the physician may charge the patient a fee in addition to that received from the plan if the latter's income is above a specified amount or if he uses a private room while hospitalized.

large percentage of the physicians in the area may provide service under the plan, group practice plans are, in effect, excluded because such plans provide service through a limited number of physicians working either full time or part time in an organized group under medical supervision.

The advantages of group practice were interestingly presented in a recent Senate subcommittee interim report on health insurance. The report stated that "Most of the plans offering comprehensive prepaid medical care are group practice plans . . . There is evidence, both qualitative and quantitative, that well-organized group practice can offer better medical care than individual practice."<sup>7</sup> The preference of physicians, particularly young physicians, for this type of practice was indicated in a survey among medical officers in the armed forces, sponsored by the American Medical Association, which showed that more than half the doctors replying wanted to enter private group practice after their discharge.<sup>8</sup>

An additional indication that prepayment plans in most States that have recently enacted legislation will be under strong pressures to follow the medical society pattern is found in the fact that four of these States—Illinois, Kentucky, North Dakota, and Tennessee—specify that every licensed physician in the area where the plans operate has a right to participate in providing services. Alabama requires that the beneficiary shall have the right to select any member of the county medical society; and Minnesota not only provides that the patient may select his physician but, as a further guarantee of free choice, forbids any contracts or agreements between physicians and plans with respect to rendering service to subscribers and states that the selection of a physician "shall be a matter of agreement directly between the patient and the doctor of medicine selected by the patient to treat him." Plans in all these States have no choice regarding the manner in which services will be provided.

<sup>7</sup> Senate Committee on Education and Labor, *Health Insurance*, Subcommittee Report No. 5, July 1946, pp. 10-11.

<sup>8</sup> Based on data in the *Journal of the American Medical Association*, June 24, 1944, pp. 558-560.

The medical society practice of using a participating physician must be followed.

The restricted nature of the services now being provided by medical society plans under most recent legislation will be of concern to all persons interested in the establishment of comprehensive medical care programs. Such an authority as Louis H. Pink, president of the Associated Hospital Service of New York and former Superintendent of Insurance of the State of New York, has recognized the weakness of voluntary plans with too limited services and has advised against them. At a recent meeting of the Medical Society of the County of New York, Mr. Pink emphasized the responsibility of voluntary plans to the public as a result of the special privileges granted them. He pleaded for the enrollment of a substantial percentage of the population and for a broad health program adaptable to the needs of each community. He emphasized particularly the value of stressing and developing preventive measures.

### *Attitude of State Medical Societies Toward Recent Legislation*

To determine the attitude of the medical societies toward recently enacted legislation, a review was made of the official publications of societies in States where laws were enacted. In a number of instances the societies not only approved this type of legislation but were actually responsible for its passage. While some of the journals have merely referred to the laws briefly with such comments as "our medical and hospital prepayment insurance bill," others have discussed the acts in detail and have taken full credit for framing them and assuring their passage.<sup>9</sup>

## Employment Security

### Unemployment Claims and Benefits

#### State Programs

Substantial declines in both initial and continued claims for State unemployment insurance in November represented a return to more normal levels after the October rise, when the claims loads shot up, mainly because of the power dispute in Pennsylvania and the trucking dispute in New York. Initial claims dropped from 681,600 to 620,000, after having increased in the preceding 2 months. The drop in continued claims from 4.1 million to 3.5 million more than offset the October increase and brought these claims to the lowest level since August 1945. The rescheduling of claims from Thanksgiving Day to the following week, which fell in December, and the fact that November had fewer reporting days than October were also important factors in the general decline. Significant increases in both types of claims, however, were reported by the 3 Pacific Coast States—California, Oregon, and Washington.

The drop in claims was paralleled by the decline in the average weekly number of beneficiaries, from 764,000 to 698,000, and the \$10.4 million drop to \$54.1 million, in the amount of benefits paid.

In initial claims the drop of 62,000 offset approximately 60 percent of the increase which had occurred in October (table 3). More than two-thirds of this decline was accounted for by the drop of 46,000 in Pennsylvania, where, in addition to the decline from the October peak caused by the Pittsburgh power strike, there were only 18 working days as compared with 23 in the preceding month. Other outstanding declines were 11,500 in Michigan (following a drop of 16,100 in October), 8,100 in New Jersey, and 5,100 in New York. For the third successive month, California reported an increase in initial claims; the rise from 84,800 in October to 94,600 in November was due to seasonal factors, accentuated by inclement weather.

The increases of 2,600 in Oregon and 8,200 in Washington were also seasonal, resulting from a curtailment of logging operations and construction activity with the beginning of winter weather, particularly in the second half of the month.

All but 8 States reported fewer continued claims. The drop of 207,600 in Pennsylvania was the largest in the country, followed by 68,600 in Illinois, 56,200 in Michigan, and approximately 43,500 each in New Jersey and in New York (table 4). Eight other States—Alabama, Iowa, Louisiana, Maryland, Massachusetts, Missouri, Ohio, and Tennessee—had declines ranging from 10,000 to 30,000. California, Oregon, and Washington, with increases in initial claims, also reported jumps in continued claims of 4,100, 5,600, and 6,000, respectively. Another notable rise in continued claims was the increase of 5,000 in Connecticut, which reflected a labor dispute in the New Haven area and material shortages in Stamford resulting from the recent trucking dispute in New York.

Approximately 7 percent of the initial and 9 percent of the continued claims filed during November were in-

terstate claims received as agent State (tables 3 and 4).

During November the average weekly number of beneficiaries fluctuated between 622,000 and 764,000, largely because the Election Day, Armistice Day, and Thanksgiving holidays threw off the regular schedule for the filing of claims (table 2). Washington was the only State to report a substantial increase in beneficiaries during the week ended November 30, which included the Thanksgiving holiday.

Benefit payments resumed their downward trend after the slight increase in October, dropping from \$64.4 million to \$54.1 million, to compensate for 2,990,000 weeks of all types of unemployment (table 5). Disbursements in Pennsylvania were \$2.4 million less than in October, while Illinois and New York reported declines of more than \$1 million. Of the 8 States showing increases in benefit payments in November, Washington—with an increase of \$435,200—was outstanding. All other increases were less than \$20,000. The average weekly check for total unemployment during November<sup>1</sup> was \$18.30; for women the average was \$17.54.

Women claimants filed 44 percent

<sup>1</sup> Data for California and New Jersey not included.

Table 1.—Summary of unemployment compensation operations, November 1946

Item	Number or amount	Amount of change from—	
		October 1946	November 1945

Funds available as of Nov. 30, 1946 <sup>7</sup> .....	\$6,878,388,350	+\$58,909,088	-\$101,344,387

<sup>1</sup> Includes estimate for Alaska.

<sup>2</sup> Excludes Texas, which has no provision for filing additional claims; also Maryland before April 1946, Ohio before September 1946, and Wisconsin before February 1946.

<sup>3</sup> Excludes Maryland, which has no provision for filing waiting-period claims.

<sup>4</sup> Includes estimates for California, and for Pennsylvania for total and other than total unemployment.

<sup>5</sup> Excludes Montana, which has no provision for payment of other than total unemployment, and Pennsylvania before January 1946.

<sup>6</sup> Before July 1946, computed from weeks compensated in the calendar month; beginning July 1946, computed from weeks compensated in the weeks ended during the month.

<sup>7</sup> Gross: not adjusted for voided benefit checks and transfers under interstate combined wage plan. Includes Arizona, Colorado, and Washington as of Oct. 31, 1946.

<sup>8</sup> Includes Arizona, Colorado, and Washington as of Oct. 31, 1946.

of the initial claims and 46 percent of the compensable claims, and they received 44 percent of the benefits. Although these proportions were slightly higher than in October, they have remained fairly steady since June; during the spring and early summer, however, the proportions were much lower, as shown below:

Month	Percent of claims filed and benefits received by women		
	Initial claims	Compensable claims	Amount of benefits
January.....	32	46	(1)
February.....	30	40	(1)
March.....	36	37	(1)
April.....	38	38	(1)
May.....	34	39	(1)
June.....	42	40	(1)
July.....	43	44	41
August.....	43	45	42
September.....	41	46	43
October.....	43	45	43
November.....	44	46	44

<sup>1</sup> Data not available.

Unemployment during the week ended November 9, as represented by the ratio of continued claims to covered employment, was 3.0 percent. This ratio has dropped each month since March, when it reached a high of 6.8 percent. Washington reported the highest percentage for November, 6.4; New York was next, with 5.7, and California followed, with 5.5. Each of these three ratios was above comparable figures for October. Altogether, 34 States showed a smaller ratio for November than for October. Among the States with notable declines were Pennsylvania, where the ratio dropped from 4.0 to 2.5 percent; Iowa, 2.6 to 1.3 percent; Nebraska, 2.5 to 1.3 percent; and South Dakota, 3.1 to 1.4 percent. In Colorado, Wisconsin, and Wyoming the ratios were less than 1 percent (table 9).

During November, 225,000 claimants received their first benefit check in their benefit year. During the same period, 92,000 claimants exhausted all benefit rights and received their last check. New York reported 41,500 first payments with no exhaustions, since sufficient time had not elapsed in their benefit year, which began June 3, for any claimant to exhaust the full 26 weeks of benefits to which all eligible claimants are entitled. Ohio, on the other hand, reported that 5,000 persons received their first benefit check and 4,600 persons received the last check to which they were entitled.

In Texas the 3,400 first payments were offset by the 3,300 exhaustions during the month.

### Interstate Claims, October 1946

The volume of interstate initial claims during October rose 11 percent, as compared with 18 percent in all

initial claims (table 7). Almost all the larger industrial States received more liable interstate initial claims than in September. Interstate continued claims, on the other hand, dropped 6 percent in October, while all continued claims rose 6 percent. In Maryland, liable continued claims

Table 2.—Number of individuals<sup>1</sup> compensated for unemployment during weeks ended in November 1946

<sup>1</sup> Number of individuals is assumed to be identical with number of weeks compensated. This assumption may result in a slight overstatement of number of individuals.

<sup>2</sup> Includes estimates for California, and for Pennsylvania for total unemployment.

<sup>3</sup> Data not available.

for October dropped 6,700. Washington and Illinois also reported declines—3,800 and 2,800, respectively. New York had the only outstanding increase (5,000) in the number of con-

tinued claims received as liable State. Table 6 gives a cross-tabulation of interstate initial claims by agent and liable State for the third quarter of 1946.

### Veterans' Unemployment Allowances

Readjustment allowances paid to unemployed veterans dropped from \$100 million in October to \$74 million

<sup>1</sup> Includes waiting-period claims except in Maryland, which has no provision for filing such claims; in some States includes claims for more than 1 week.

<sup>2</sup> Total continued claims in some States include claims for more than 1 week.

<sup>3</sup> Includes estimates for Alaska; data not yet received.

in November, continuing the decline which began in February 1946. The amount represented payment for 3.7 million weeks of unemployment, as compared with 5.0 million weeks compensated in October.

Although the total number of initial claims declined in the country as a whole, claims increased in 33 States. The largest increases occurred in 6 Northwestern States—Alaska, 60 percent; Washington, 70 percent; Mon-

tana, 88 percent; North Dakota, 90 percent; Wyoming, 172 percent; and Idaho, 472 percent. Four of the 19 States with declines in initial claims reported decreases of more than 20 percent. Continued claims declined

Table 5.—Number of weeks compensated and amount of benefits paid for all types of unemployment, and average weekly payment for total unemployment, by State, November 1946

<sup>1</sup> Gross; not adjusted for voided benefit checks and transfers under interstate combined wage plan.

<sup>2</sup> Includes estimates for California, and for Pennsylvania for weeks compensated and benefits paid to women claimants and for average weekly payment for total unemployment.

<sup>3</sup> Data not available.

<sup>4</sup> Data estimated by State agency.

<sup>5</sup> Data for October 1946 not yet received.

24 percent in the country as a whole. All but 11 States shared in the decline.

## Time Lapse in Benefit Payments, July-September 1946

For the first time, data on time lapse in intrastate benefit payments are available separately for claims taken on a weekly basis and for those taken biweekly. The Bureau of Employment Security has been aware of the limitations of data which gave only the net effect of single and of

multi-benefit-period claims. A claim taken on a biweekly basis automatically adds 7 days to the time lapse in payments for the first of the 2 weeks covered by the claim. When such weeks are included, the over-all time-lapse record does not accurately reflect the efficiency of claims processing.

The detail now available on claims taken biweekly helps in evaluating the effect of such claims on time lapse in the payment of benefits. Also, States have been grouped according to the type of week under which they operate—calendar or flexible—and separately for intrastate and interstate

payments, to show the extent to which the type of week affects the payment procedure.

It is recognized, however, that additional administrative factors affect the time-lapse picture; many of them are peculiar to individual States and, because of their nature, cannot be put in tabular form.

Care should be taken in making a State-by-State comparison of the data in the attached tabulations. Many of the percentages are based on relatively small numbers of payments and are therefore not valid indicators. Administrative and statutory provisions other than those mentioned

<sup>1</sup> Represents all agent States with 2,475 claims or fewer in the quarter.

here, which affect time lapse, should also be considered in interpreting the data.

The July 4 and Labor Day holidays during the quarter helped lengthen the time lapse, since claimants due to report on a holiday are usually rescheduled to report on the same day in the following week. This procedure automatically adds 7 days to the time lapse of all the payments originally scheduled for a holiday.

During the quarter, 28 States took all their claims on a weekly basis, 10 States took all claims on a biweekly basis, and 12 States took both weekly and biweekly claims. In Texas a claim for benefits is taken only every 2 weeks for the statutory 2-week benefit period, but thereafter claims are received each week, and time lapse is measured from the end of the 2-week benefit period. Only North Carolina and Vermont took some of their in-

trastate claims at intervals of 3 weeks or more. North Carolina received 52 claims and Vermont 46 claims on this basis. Time-lapse data for these payments are not included in the tabulations.

In broad terms, without regard to type of claims taking, there was a general decline from the April-June period in the promptness with which payments were made during July-September. Exceptions were the in-

Table 7.—Interstate claims received, weeks compensated by interstate payments, and amount of interstate benefit payments, by liable State, October 1946

<sup>1</sup> Estimated number of continued claims for week ending the 8th of the month falls.

<sup>2</sup> Represents workers in covered employment in the pay period of each type (weekly, semimonthly, etc.) ending nearest the 15th of the month.

ments made within 2 weeks are classified below by type of claims taking, type of payment, and type of week.

Type of week	Weekly		Biweekly	
	First payments	2d and subsequent payments	First payments	2d and subsequent payments
Total.....	70.4	88.7	46.4	64.4
Calendar.....	72.7	90.7	47.4	56.3
Flexible.....	68.4	86.6	46.1	66.4

These data show the vast difference in time lapse for claims taken weekly and for those taken biweekly. It is notable that, among States on a weekly basis, a larger proportion of the checks were issued within 2 weeks in calendar-week States than in flexible-week States. The low proportions in Pennsylvania, a flexible-week State which accounted for more than a fourth of all such payments, pulled down the average for the group (table 11). The reverse was true for second and subsequent payments in States receiving claims biweekly. The proportion of second and subsequent payments for flexible-week States

taking claims on a biweekly basis was weighted downward by the low proportion in Illinois, which accounted for more than a third of all these payments. The difference between the 2 types of weeks is more pronounced than the percentages of 66.4 and 56.3 would indicate, since only 1 calendar-week State in 7 paid as much as 65 percent of its second and subsequent payments within 2 weeks, while 11 out of 15 of the flexible-week States issued 80 percent or more of these payments within that time (table 10).

### Intrastate First Payments

**Claims taken weekly.**—More than 70 percent of the 602,800 first payments, claims for which were taken weekly, were made within 2 weeks of the end of the compensable period (table 11). Of the 40 States which took all or part of their claims on a weekly basis, Alaska, Arizona, California, Hawaii, Maryland, Montana, Virginia, and Washington issued more than 90 percent of these payments within 2 weeks. It is significant that, of these 8, only Washington has a calendar week. Oregon reported an

<sup>1</sup> Represents number of weeks elapsed between the end of the benefit period and the date of payment. Includes only those intrastate benefit payments from States which have a 1-week benefit period and which take all or a part of their claims on a biweekly basis.

<sup>2</sup> A calendar week is a period of 7 consecutive days, uniform for all claimants, usually ending on Saturday.

<sup>3</sup> A flexible week is a period of 7 consecutive days, the beginning of which is determined in relation to the date on which a claim is filed.

increase from 78 to 86 percent as new agency staff gained experience and the total number of payments issued decreased 65 percent. At the other end of the scale were 7 States which issued less than 60 percent of their first payments within 2 weeks on claims taken weekly.

Compared with the April-June

quarter, the proportion dropped in Pennsylvania from 79 to 55 percent and in Rhode Island from 76 to 42 percent. The decline in Pennsylvania was partially due to the fact that 50,000 miners' claims were paid for the week ended May 18, after a decision on an employer appeal. In the District of Columbia, Indiana, and

Michigan, however, the proportions were higher than in the April-June period. Arizona, Ohio, South Dakota, Texas, and Virginia showed notable improvements; the proportions of first payments made within 2 weeks were 10 or more percentage points above those for April-June. In West Virginia, 70 percent of the first pay-

<sup>1</sup> Represents number of weeks elapsed between the end of the benefit period and the date of payment. Includes only those intrastate benefit payments from States which take claims on a weekly basis and from Texas where claims are filed in each week following the statutory 2-week benefit period.

<sup>2</sup> A calendar week is a period of 7 consecutive days, uniform for all claimants, usually ending on Saturday.

<sup>3</sup> Since Wisconsin State law does not provide for a benefit year, figure represents number of first payments in connection with each spell of unemployment.

<sup>4</sup> A flexible week is a period of 7 consecutive days, the beginning of which is determined in relation to the date on which a claim is filed.

<sup>1</sup> Represents number of weeks elapsed between the end of the benefit period and the date of payment. Includes all interstate benefit payments regardless of the frequency of claims taking within the State.

<sup>2</sup> A calendar week is a period of 7 consecutive days, uniform for all claimants, usually ending on Saturday.

<sup>3</sup> Since Wisconsin State law does not provide for a benefit year, figure represents number of first payments in connection with each spell of unemployment.

<sup>4</sup> A flexible week is a period of 7 consecutive days, the beginning of which is determined in relation to the date on which a claim is filed.

ments resulting from weekly claims were paid within 2 weeks. This State has a mandatory delay of 15 days to allow for additional appeals before payments can be made in disputed cases involving a decision by the central authority. This provision automatically adds 15 days to all disputed cases, unless the employer waives his right of appeal. The proportion in Massachusetts dropped from 78 to 72 percent, partly as a result of the heavier load of appealed cases and the greater time lapse for payments in appeals decisions.

*Claims taken biweekly.*—Of the 173,900 first payments on claims taken biweekly during the quarter, 46 percent were made within 2 weeks and 16 percent after 6 or more weeks. At the top of the list were Louisiana and Maryland, which issued 84 and 87 percent of these payments within 2 weeks. Maryland, however, made only 100 payments on claims received biweekly. Among the States with 100 or more of such payments, Georgia, Minnesota, Texas, and Virginia paid 70 percent or more within 2 weeks. On the other hand, Illinois, with 57,000 first payments, issued only 28 percent, and Oklahoma, with 7,400 first payments, issued only 35 percent. In Connecticut the drop from 68 to 49 percent was attributed to the volume of appealed cases during the quarter.

#### *Intrastate Second and Subsequent Payments*

*Claims taken weekly.*—During the quarter, 88.7 percent of the 7,963,600 second and subsequent payments based on weekly claims were paid within 2 weeks. Of the 41 States which received claims weekly, 27 were able to issue 90 percent or more of these payments within 2 weeks, and only 5—the District of Columbia, Florida, Idaho, Indiana, and Kentucky—issued less than 80 percent. In Florida the drop in the proportion to 78 percent from 91 percent in the preceding quarter was due to a mass lay-off in the cigar-manufacturing industry, which increased the claims load and therefore delayed the processing of payments. Indiana, however, showed an improvement over the last quarter with a rise from 51 to 58 percent in the proportion issued within

2 weeks. The District of Columbia also increased, from 68 to 77 percent, the proportion issued within 2 weeks. The 90 percent in North Carolina was an improvement over the April-June period, partly due to a lower volume of payments which meant a better relation of payments to check-writing capacity. Wyoming's 91 percent represented a notable improvement over the preceding quarter and was attributed to a reduced claims load. In Pennsylvania the drop from 91 to 81 percent was attributed to the inauguration on a State-wide basis of the scheduling of compensable claims according to social security number, a procedure that added 1-6 days to the over-all time lapse. Partly offsetting this factor, however, was the reduction of the backlog of pay orders awaiting location of control cards.

*Claims taken biweekly.*—Of the 22 States taking claims on a biweekly basis, 11 issued 80 percent or more of their intrastate second and subsequent payments within 2 weeks; these 11 States were all on a flexible-week basis. In 4 States—Alabama, Georgia, Maryland, and Nebraska—the proportions were above 90 percent, but in all but Georgia the volumes were very small. Illinois had the greatest volume, 868,200, and also issued the smallest proportion (43 percent) within 2 weeks. Both New Jersey and Missouri, with the second and third largest volumes, issued more than 80 percent within 2 weeks.

#### *Interstate Payments for All Unemployment*

During the July-September period, 24 percent of the 59,800 interstate first payments were issued within 2 weeks as compared with 32 percent of 94,100 such payments in April-June (table 12). The low proportions in California and Washington weighted the national average downward. In California, only 3 percent of the 9,400 interstate first payments were issued within 2 weeks; this low proportion was attributed to the 15,000 redeterminations and appealed cases, a shortage of personnel caused by termination of appointments for temporary personnel, and vacation schedules. Part of the drop in the proportion for Washington, from 21 to 8 percent, was due to the increase

from 3,800 to 8,900 in the volume of interstate first payments. Of the 17 States to show less promptness in the issuance of these payments, 12 reported a drop of 10 or more percentage points in the proportion issued within 2 weeks. In Arkansas the percentage dropped from 58 to 26, in Connecticut from 64 to 24, in Maryland from 88 to 65, in Utah from 48 to 12, and in Vermont from 90 to 38. In Ohio the low of 7 percent of these payments issued within the 2-week period was attributed to the fact that 78 percent of the interstate claims from agent States reached the Ohio central office 2 weeks or more after the end of the compensable period claimed. Of the 34 States to show improvement in making this type of payment, 16 increased the proportions paid within 2 weeks by more than 10 percentage points. Outstanding among these States were Alaska, where the percentage rose from 20 to 44; Colorado, from 22 to 66; Oklahoma, from 17 to 40; Oregon, from 32 to 55; and Texas, from 5 to 39.

During July-September, approximately 37 percent of the 916,100 interstate second and subsequent payments were issued within 2 weeks, as against 39 percent of 1,353,900 such payments in April-June. Despite this decline in the national average, 31 States reported improvement over the preceding quarter's records. California and Washington, which accounted for nearly a third of all the interstate second and subsequent payments, issued 4 and 17 percent, respectively, of these payments within the 2-week period. In these 2 States, the factors responsible for the delay in first payments, mentioned above, were also responsible for the delay in second and subsequent payments. In 5 States—Arkansas, California, Massachusetts, North Dakota, and Utah—the proportions of these payments made within 2 weeks dropped 10 or more percentage points from those in the preceding quarter. At the other extreme were 13 States in which this proportion rose 10 or more percentage points. Outstanding among these were the increases from 37 to 70 percent in Colorado, from 50 to 68 in Iowa, from 22 to 40 in Kansas, from 14 to 52 in Texas, and from 52 to 71 in West Virginia.

## Nonfarm Placements

Nonfarm placements in November totaled 440,000, 20 percent less than in October and the smallest number reported since March. Nonagricultural employment, estimated at 49.1 million, reached a new high even above the wartime peak. Only 3 States reported increases in placements—Florida, of 10.2 percent, Illinois, 0.4 percent, and North Dakota, 7.6 percent.

the Bureau of the Census, is the lowest since demobilization reached its peak in the winter of 1945; the decline of 22 percent in placements of veterans broke the almost continuous increase since February in such placements. Forty-six States reported declines, ranging from 1.2 percent in North Dakota to 48.0 percent in

Washington; 29 States had declines of more than 20 percent. Only 3 States—Florida, Illinois, and Vermont—reported slight increases.

Placements of women dropped 15.3 percent for the country as a whole but increased in 5 States. The increases ranged from 1 percent in Colorado to 24 percent in North Dakota.

## Old-Age and Survivors Insurance

### Applicants for Account Numbers, July–September 1946

In the third quarter of 1946, for the first time since April–June 1943, more social security accounts were established than in the corresponding quarter of the preceding year. This reversal of trend presumably resulted from the curtailment of inductions into the armed forces, the still appreciable though diminishing flow of discharged servicemen into the labor force, and the heavy demand for labor in expanding manufacturing, trade, and service establishments.

The 966,000 applications constituted the largest quarterly total since the end of the war and represented a 7-percent increase from the third quarter of 1945. Men and women contributed about equally to the rise; the gain was 8 percent for men and 7 percent for women. Women and girls, however, continued to outnumber men and boys. The proportion of male applicants, which had been increasing rapidly in the 3 quarters since the be-

ginning of large-scale demobilization, was virtually the same this quarter as in the comparable quarter of the preceding year.

The increase in the number of applicants was confined largely to persons aged 20 and over and almost entirely to white applicants. The number of applications received from persons in these ages was 17 percent larger than in July–September 1945, while the number of accounts established for persons under age 20 increased by only 2 percent. As a result of the "Selective Service holiday," however, the number of male applicants aged 18–21 more than doubled.

In contrast to a 12-percent increase in the number of white applicants, the number of accounts established for Negroes was 12 percent less than in July–September 1945. Negroes constituted slightly less than 14 percent of the total, as compared with 17 percent a year earlier and a wartime peak of 19 percent in the third quarter of 1944.

Table 1.—Number of applicants for account numbers, by year, 1940–45, and first, second, and third quarters 1946, and estimated number of living account-number holders at end of each period

<sup>1</sup> Represents all races other than Negro.

Both the absolute and relative number of accounts established for elderly persons continued to decline. The 25,000 applicants aged 60 and over formed less than 3 percent of the total and represented a 5-percent decrease from the number in the third quarter of 1945.

By the end of September, 86.2 million employee accounts had been established. An estimated 77.0 million living persons, or 71 percent of the estimated population aged 14 and over, held account numbers.

#### Monthly Benefits in Current-Payment Status, November 1946

At the end of November more than 1.6 million persons had benefits in current-payment status at a monthly

rate totaling \$30.8 million (table 4). The net increase of 20,300 beneficiaries was less than for any month since December 1944.

As in October, there was a decrease in the number of widow's current benefits in current-payment status. While the total number of widow's current benefits in force has continued to rise, the increase each month has been smaller and smaller, dropping from 2,000 in March to 500 in November. This downward trend in rate, together with an increase in suspension actions and a smaller number of reinstatements during the last few months, resulted in the decline in the number in current-payment status.

For all types of benefits except wid-

ow's benefits, fewer awards were processed during November than in any other month of 1946. For survivor benefit awards, this decline came mainly because a majority of the November awards result from deaths during the late summer months, when death rates are low.

Under the 1946 amendments, entitlement to primary benefits became retroactive for as much as 3 months, just as entitlement to supplementary and survivor benefits has been. The new provision, which became effective with applications filed after December 31, 1946, contributed to some extent to the decrease in the number of primary and, hence, of wife's benefits in November. If a claimant who could have been entitled to primary benefits in October did not file until November, he would have lost benefits for October. By waiting until January 1947 to file an application, however, he became entitled to benefits beginning with October. Field offices have been instructed to advise claimants as to the most advantageous filing date.

Monthly benefit certifications in November amounted to \$32.3 million. Lump-sum certifications totaled \$2.0 million, about one-fifth less than in October. Included in these amounts are \$68,600 certified for monthly benefits and \$143,500 for lump sums, payable under the 1946 amendments to survivors of veterans of World War II.

<sup>1</sup> Benefit in current-payment status is subject to no deduction or only to deduction of fixed amount which is less than current month's benefit.<sup>2</sup> Represents total benefits awarded (including benefits in current, deferred, and conditional-payment status) after adjustment for subsequent changes in number and amount of benefits (see footnote 4) and terminations (see footnote 3), cumulative from January 1940.<sup>3</sup> Benefits are terminated when a beneficiary dies or loses entitlement to benefits for the reasons specified in 1939 amendments, sec. 202.<sup>4</sup> Adjustments result from operation of maximum and minimum provisions of 1939 amendments, sec. 203(a) and (b), and from other administrative actions.<sup>5</sup> Less than \$50.

## Public Assistance

### State and Local Expenditures for Assistance in Relation to Income Payments

From 1940 to 1945, a substantial change downward occurred in most States in the proportion of total income payments represented by expenditures for public assistance from State and local funds.<sup>1</sup> During this period, income payments increased at a spectacular rate in all States. This upward sweep was accompanied by a decline in State and local expenditures for public assistance in 21 States and by a percentage increase in assistance expenditures smaller than that in income payments in 22 States. In the remaining 6 States—Alabama, Arkansas, Mississippi, New Mexico, Texas, and Washington—the percentage increase in assistance expenditures exceeded that in income payments, and in these States therefor a rise in the ratio of assistance

<sup>1</sup> See footnote, table 1.

expenditures to income payments took place from 1940 to 1945 (table 1).

For the country as a whole, State and local expenditures for assistance represented not quite 1 percent of total income payments in 1940; by 1945, following an increase of 100 percent in income payments and a decline of 11 percent in State and local assistance expenditures, this proportion had shrunk by more than half, to 0.43 percent. The 11-percent decline in State and local assistance expenditures was accounted for primarily by the very large decline in expenditures for general assistance during the period—74 percent. Expenditures for the special types of public assistance, on the other hand, were about 60 percent greater in 1945 than in 1940; because of the greater relative increase in income payments, however, these expenditures comprised only 0.36 percent of income payments in 1945 in contrast to 0.44 percent in 1940.

The relationship of State and local expenditures for public assistance to total income payments is one measure—though admittedly rough—of the effort made by the States to support public assistance programs. It can be argued that a poor State that spends the same proportion of income payments as a rich State is actually putting forth relatively greater effort, because the margin of income available for all governmental services including public assistance is smaller in a poor than in a rich State. Furthermore, use of this measure omits from consideration the entire tax effort exerted by a State, which also is a factor of considerable importance in determining whether or not a State could reasonably be expected to increase the amounts made available for public assistance. Thus the ratio of assistance expenditures to income payments may be low (1) when entire tax effort is low even though the proportion directed to public assistance is average or above, or (2) when the total tax effort is high and the proportion directed to public assistance

is relatively low. In the first situation, it might be feasible to increase the funds available for public assistance by increasing the over-all tax burden. States finding themselves in the second situation, however, probably would be reluctant to increase expenditures for public assistance since this would result in increasing a total tax burden already above average. Since data on State and local tax revenues are not available for a year later than 1942, current State and local expenditures for public assistance can be related only to data on income payments.

Because of the wide variations among States in per capita income, the amount of State and local expenditures per inhabitant available for public assistance in States exerting roughly the same amount of effort varies widely. In both Arkansas and New York, for example, expenditures from State and local funds for public assistance in 1945 represented the same proportion (0.32 percent) of total income payments. In other words, for every \$10 of income available to the inhabitants of these two States, about 3 cents was drawn off in State and local tax revenues and expended

for public assistance. Each State may be said, therefore, to have made approximately the same effort to support the public assistance programs. Residents of Arkansas, however, had on the average \$654 of income in contrast to an average of \$1,595 for New Yorkers. Consequently, the amount of State and local funds raised per inhabitant for public assistance in Arkansas—\$2.19—was only about 40 percent of the \$5.38 available in New York on the basis of the same effort. As shown in chart 1, other pairs or groups of States presenting a similar contrast were as follows:

Table 1.—Expenditures for public assistance from State and local funds: Percentage change, 1940 to 1945; percent of income payments, 1940 and 1945; and amount expended per inhabitant, 1945<sup>1</sup>

Included among the 28 States in which State and local expenditures for assistance increased in the period 1940-45 were 23 of the 30 States with below-average per capita income. Percentage increases of 100 or more occurred in 10 States. All but one of these States were below average in per capita income, and 7 were among the 12 States with lowest per capita income. Despite these unprecedented increases in State and local expenditures for assistance in the lowest-income States, only 3—Oklahoma, New Mexico, and Louisiana—made better-than-average effort to support the public assistance programs in 1945. On the other hand, 6 of the 12 lowest-income States—Georgia, South Carolina, Tennessee, Alabama, Kentucky, and North Carolina—were among the 12 States making the least effort (chart 1).

Even if the lowest-income States that were making less-than-average effort in 1945 had made at least average effort, the amounts per inhabitant they could have raised would have been well below the national average. Thus Mississippi, with the lowest per capita income, would have raised

<sup>1</sup> Expenditures for public assistance from State and local funds exclude amounts spent for administration and are for the calendar year 1940 and the

fiscal year 1945-46; these expenditures are related respectively to income payments for 1940 and 1945.

Chart 1.—Expenditures for public assistance from State and local funds, 1946<sup>1</sup><sup>1</sup> Fiscal year 1945-46.

\$2.58 per inhabitant—about 50 percent of the national average—and West Virginia, which ranked at the top in this group of low-income States, would have had \$3.66 per inhabitant or less than three-quarters of the national average; and the other States would have fallen between these extremes. Since the lowest-income States, in general, are those in which the proportion of the population receiving assistance is relatively large, it is reasonable to assume that the amounts expended per inhabitant should be larger rather than smaller than the average for the country as a

whole if individual assistance grants are to be comparable to those in States with higher per capita incomes.

The recent amendments to the Social Security Act made additional funds available to all States for a 15-month period ending December 31, 1947. Under these amendments, if State and local expenditures remain at 1945 levels, it is anticipated that the largest percentage increases in Federal funds in general will occur in the lowest-income States. These are the States in which average payments in general are relatively low. In these States the Federal share of total pay-

ments will be considerably more than 50 percent under the new matching provisions. For these 15 months, therefore, it is to be expected that the total amounts expended per inhabitant from Federal, State, and local funds will increase relatively more in the low than in the high-income States.

## Program Operations

Small additions to the case loads for all types of public assistance occurred in November. The largest increase—2.8 percent in general assistance—followed the customary seasonal trend for this program. The rise of 2.3 percent in the number of families receiving aid to dependent children was the highest since April; seasonal increase in need together with the additional Federal funds made available by the recent amendments to the Social Security Act contributed to this rise. The November addition of 0.9 percent to the old-age assistance rolls was greater than in months before October, primarily because several States started to make separate payments to wives who previously had been aided through joint payments to their husbands and had not been reported as recipients. The rise of 0.6 percent in the number of recipients of aid to the blind represents the average monthly increase for this type of aid in 1946.

As in October, the recent amendments had a more pronounced effect on payments than on the number of recipients, although the monthly increase in total payments was much smaller in November. Total payments for old-age assistance and for general assistance increased 2.5 percent, those for aid to the blind, 1.8 percent, and those for aid to dependent children, 3.4 percent. For the country as a whole, average payments for each of the special types of assistance increased less than \$1 over the October averages; and for general assistance the average declined slightly.

In several States, however, the changes in average payments since the increased Federal participation became effective October 1 have been noteworthy. The amendments made possible an increase of \$5 per match-

<sup>1</sup> For definitions of terms see the *Bulletin*, July 1945, pp. 27-28. All data subject to revision.

<sup>2</sup> Partly estimated; does not represent sum of State figures because total excludes payments for, and an estimated number of cases receiving, medical care, hospitalization, and burial only in Indiana and New Jersey.

<sup>3</sup> State program only; excludes program administered by local officials.

<sup>4</sup> Based on actual reports including an estimated 95 percent of cases and payments.

<sup>5</sup> Estimated.

<sup>6</sup> Excludes assistance in kind and cases receiving assistance in kind only and, for a few counties, cash payments and cases receiving cash payments. Amount of payments shown represents about 60 percent of total.

<sup>7</sup> Includes unknown number of cases receiving medical care, hospitalization, and burial only, and total payments for these services.

<sup>8</sup> Excludes a few cases and small amount of local funds not administered by State agency.

<sup>9</sup> Includes cases receiving medical care only.

<sup>10</sup> Excludes estimated duplication between programs: 1,868 cases were aided by county commissioners and 3,641 cases under program administered by State Board of Public Welfare. Average per case and percentage change in number of cases not computed.

<sup>1</sup> For definitions of terms see the *Bulletin*, July 1945, pp. 27-28. Figures in italics represent programs administered without Federal participation. Data exclude program administered without Federal participation in Connecticut, which administers such program concurrently with program under the Social Security Act. Alaska does not administer aid to the blind. All data subject to revision.

<sup>2</sup> Under plans approved by the Social Security Administration.

<sup>3</sup> Average payment not calculated on base of less than 50 recipients; percentage change, on less than 100 recipients.

<sup>4</sup> Decrease of less than 0.05 percent.

<sup>5</sup> Estimated.

<sup>6</sup> Represents statutory monthly pension of \$30 per recipient; excludes payments for other than a month.

<sup>7</sup> Increase of less than 0.05 percent.

Mexico, Ohio, Oklahoma, Utah, and Wyoming; similar increases have occurred in average payments of aid to the blind in Arizona, New Mexico, Oklahoma, Utah, and Wyoming. In aid to dependent children, average payments per child have increased more than \$3 in 14 States: Arizona, Arkansas, Kansas, Kentucky, Maryland, Massachusetts, Michigan, Missouri, New Mexico, Oklahoma, Oregon, Utah, Wisconsin, and Wyoming.

Substantial increases in payments have also occurred in other States.

The limitations on payments which still exist in some States, however, show how urgent was the need for the increase. Policy changes in Arkansas, for example, brought total payments for old-age assistance in November more than one-fourth higher than in September. Payments for aid to dependent children were nearly two-fifths above the September amount, and those for aid to the blind were more than one-fifth higher. The changes chiefly responsible were increases to \$45 in the

State maximums for most aged and blind recipients and to \$24 for a one-child family receiving aid to dependent children, with \$15, \$12, \$12, and \$9 for successive additional children. The percent of need met subject to the maximums was raised to 85; 100 percent is met in exceptional cases. Need is determined on the basis of cost figures, which have not been raised since 1944.

In Utah, revision of assistance standards and cost figures to adjust to present price levels, planned before

<sup>1</sup> For definitions of terms see the *Bulletin*, July 1945, pp. 27-28. Figures in italics represent program administered without Federal participation. Data exclude programs administered without Federal participation in Florida, Kentucky, and Nebraska, which administer such programs concurrently with programs

under the Social Security Act. All data subject to revision.

<sup>2</sup> Under plans approved by the Social Security Administration.

<sup>3</sup> Average payment not calculated on base of less than 50 families; percentage change, on less than 100 families.

the Federal amendments were enacted, has increased average payments in this State by more than \$5 per aged and blind recipient and by more than \$8 per dependent child. Increases in aid to dependent children stated in terms of amount per child exaggerate the increase in assistance, however, since part of the payment must meet the need of the mother

and, in some families, the incapacitated father or other family members.

Although the increase in the average payment of general assistance since September has been lower for the country as a whole than that for old-age assistance and aid to dependent children, the average payment per general assistance case in November was more than \$5 above that in Sep-

tember in Maryland, New Hampshire, Pennsylvania, Utah, Wisconsin, and Wyoming. Total payments for general assistance rose more than 10 percent in Kansas, Nebraska, New Mexico, Oregon, South Dakota, and Washington and 24 percent in Maryland; only in Oregon and Washington was the rise in case loads as large as that in payments.

## Social and Economic Data

### Social Security and Other Income Payments

#### All Income Payments to Individuals

In November, income payments totaled \$14.5 billion, 2 percent more than in October and 10 percent more than the total a year earlier (table 1). The rise from the October level is attributable primarily to a gain of \$189 million in entrepreneurial income, net rents, and royalties; only social insurance and related payments were less in November than in the preceding month.

Wage and salary payments in November, compared with those a year earlier, increased 7.4 percent; covered pay rolls rose one-fourth, while non-covered wages went down by 21 percent. Consequently, estimated earnings of workers covered by the Social Security Act represented about 70 percent of all wages and salaries in November and roughly 60 percent of the total a year earlier. In the non-covered group, railroad and agricultural wages increased by 12 and 7 percent, respectively, while government pay rolls dropped 36 percent.

Social insurance and related payments declined for the sixth month in succession but were nearly one-third above the amount a year earlier. Entrepreneurial income, net rents, and royalties have moved generally upward during the 13-month period, while dividends and interest have climbed without interruption; payments in these two categories stood one-third and one-tenth, respectively, above those in November 1945. Public aid payments have increased each month since May. Military allowances continued downward in November, but subsistence allowances in-

creased sharply, while bonus payments to veterans remained near the \$1 million mark. Military allowances made up the bulk of the military and subsistence segment in November 1945, but this November only one-fifth of the payments were for this purpose.

<sup>1</sup> Compensation of employees; entrepreneurial income, net rents, and royalties; and dividends and interest adjusted for seasonal variation.

<sup>2</sup> Wage and salary payments minus deductions for employee contributions to social insurance and related programs. Includes industrial pensions, payments to the armed forces, mustering-out pay, and, beginning September 1946, terminal-leave pay.

<sup>3</sup> Payments to recipients under 3 special public assistance programs and general assistance. For 1940-43, includes earnings of persons employed by NYA, WPA, and CCC and value of food stamps under food stamp plan; for 1940-42, includes farm subsistence payments.

<sup>4</sup> Payments of old-age and survivors insurance, railroad retirement, Federal, State, and local retirement, workmen's compensation, veterans' pensions and compensation, State and railroad unemployment insurance, and readjustment allowances to unemployed and self-employed veterans.

<sup>5</sup> Government portion of payments to dependents of members of the armed forces (portion deducted from military pay included under compensation of employees as part of military pay rolls), subsistence allowances to veterans under the Servicemen's Readjustment Act, and veterans' bonus.

Source: Department of Commerce, Office of Business Economics.

previously shown for the current month in a footnote, have been added to the segment on military and sub-

sistence allowances. Percentage distributions for the current month and the corresponding month a year

earlier have been added to facilitate comparisons of the relative importance of the components.

<sup>1</sup> Old-age retirement benefits under all acts, disability retirement benefits under the Railroad Retirement and the Civil Service Retirement Acts, and disability payments to veterans.

<sup>2</sup> Primary and wife's benefits and benefits to children of primary beneficiaries. Partly estimated.

<sup>3</sup> Age and disability annuants and pensioners as of last day of month. Payments represent amounts certified, minus cancellations. Widows receiving both survivor and death-benefit annuities are counted twice, but 2 or more individuals sharing 1 death-benefit annuity are counted as 1. Monthly payments to survivors include annuities to widows under joint and survivor elections and 12-month death-benefit annuities to widows and next of kin.

<sup>4</sup> Retirement and disability benefits include survivor benefits under joint and survivor elections; not adjusted for suspension of annuities of persons reemployed under the National Defense Acts of June 28, 1940, and Jan. 24, 1942. Payments principally from civil-service retirement and disability fund but also include payments from Canal Zone and Alaska Railroad retirement and disability funds administered by the Civil Service Commission. Monthly retirement payments include accrued annuities to date of death paid to survivors. Refunds to employees leaving the service are not included but are summarized twice a year in the Bulletin.

<sup>5</sup> Veterans' pensions and compensation.

<sup>6</sup> Widow's, widow's current, parent's, and child's benefits. Partly estimated.

<sup>7</sup> Payments to widows, parents, and children of deceased veterans.

<sup>8</sup> Number of decedents on whose account lump-sum payments were made, and amount of such payments.

<sup>9</sup> Payments for burial of deceased veterans.

<sup>10</sup> Number represents average weekly number of beneficiaries. Annual amounts adjusted for voided benefit checks; monthly amounts not adjusted. State unemployment insurance data for October and November 1946 partly estimated.

<sup>11</sup> Readjustment allowances to unemployed veterans only. Number before May 1946 represents average weekly number of veterans paid unemployment allowances during weeks ended in the month; number beginning May 1946 represents average weekly number of continued claims during weeks ended in the month.

<sup>12</sup> Number represents average number of persons receiving benefits for unemployment in a 14-day registration period. Annual amounts adjusted for underpayments and recoveries of overpayments; monthly figures not adjusted.

<sup>13</sup> Number of veterans and amount paid during month under the Servicemen's Readjustment Act.

<sup>14</sup> Preliminary estimate by the Veterans Administration.

<sup>15</sup> Payments to individuals: annual and lump-sum payments (amounts certified, including retroactive payments) and monthly payments in current-payment status, under the Social Security Act; amounts certified under the Railroad Retirement Act (including retroactive payments) and the Railroad Unemployment Insurance Act; disbursements minus cancellations, under the Civil Service Commission and the Veterans Administration programs; checks issued by State agencies, under State unemployment insurance and Rhode Island sickness compensation programs and under the Servicemen's Readjustment Act.

### Social Insurance and Related Payments

The \$370 million disbursed in November under the selected programs represented an 8-percent decline from the October amount and a 33-percent increase over the total for November 1945 (table 2). As compared with the Department of Commerce estimates of payments under all social insurance and related programs, disbursements under the selected programs accounted for 80 percent of the November total; a year earlier, the selected programs represented 78 percent of the Commerce estimate.

Unemployment insurance benefits totaled \$132 million, 22 percent less than in October and 2.1 percent less than in November 1945. After a slight rise in October, benefits under State laws again turned downward to \$54 million, and were about half the amount a year earlier. In November 1945 these benefits represented 39 percent of the selected social insurance and related payments; this November, less than 15 percent of the total was attributable to these benefits. Unemployment allowances to veterans were less in November than in any previous month in 1946, declining for the fourth successive month; these payments represented one-fifth of the selected social insurance and related payments in November and less than one-tenth of the total a year earlier. Railroad unemployment insurance benefits also dropped below the October level; the drop of 7.3 percent was the first decrease since July.

Monthly retirement and disability benefits under the four programs totaled \$172.6 million in November, 3.5 percent more than in October and 65 percent above the amount a year earlier. Disability payments to veterans gained 85 percent over the 13-month period and, in November, represented more than three-fourths of the total under the four programs, as compared with 68 percent of the total a year earlier. Retirement benefits in current-payment status under the Social Security Act increased 41 percent since November 1945 but, in relation to all retirement and disability payments, fell from 13.6 percent of the total in November 1945 to 11.6 percent this November. Railroad retirement and disability benefits likewise gained

(7.5 percent) over the 13-month period but formed a smaller proportion of the total for the four programs—7.3 percent in November 1946 as compared with 11 percent a year earlier—while the 14-percent gain for the civil-service program was accompanied by a drop from 7.1 to 4.9 percent as a proportion of all retirement and disability benefits.

Monthly survivor benefits under the Social Security Act in November were one-fifth greater than those a year earlier and represented one-fourth the amount paid to survivors under the three programs; the bulk of the remainder represented disbursements to survivors of veterans. Survivor benefits will increase substantially in 1947 when this type of payment becomes payable under recent amendments to the Railroad Retirement Act. Survivor payments shown currently for the railroad program represent benefits elected by railroad workers at retirement under the joint and survivor provisions of the act before amendment. Effective January 1, 1947, regular monthly benefits similar to those provided under the Social Security Act will be paid to survivors of eligible railroad workers who have already died as well as those who die in the future.<sup>1</sup>

Readjustment allowances to self-employed veterans declined for the fourth successive month; the \$15.6 million paid in November represented a drop of one-fifth from the October level and was the smallest amount disbursed in any month since March.

The number of beneficiaries under the monthly retirement, disability, and survivor programs continued to move upward, although at a slower rate than payments. Under the Social Security Act, more than 1.6 million monthly payments were made in November to retired workers and survivors of workers covered by the program, an increase of some 371,000, or 30 percent, since November 1945. About 57 percent of the November payments in current-payment status went to retired workers in commerce and industry, their wives aged 65 and over, and their children under age 18; a year earlier, 53 percent of the monthly payments represented simi-

lar benefits. Some 2.3 million disabled veterans were receiving pensions and compensation in November, 823,000, or 56 percent, more than the number a year earlier, while 842,200 dependents of 544,900 deceased veterans received monthly survivor payments, increases of 24 and 22 percent, respectively, over the numbers in November 1945. Monthly payments to retired or disabled railroad and civil-service employees also continued to mount, increasing 7.5 and 14.0 percent, respectively, during the 13-month period.

Individuals receiving unemployment insurance benefits, those receiving temporary disability payments in Rhode Island, and self-employed veterans receiving allowances were less numerous in November than in the preceding month. Compared with November 1945 levels, 47 percent fewer individuals received benefits under State laws in an average week, while in Rhode Island the average weekly number receiving disability payments also declined, but only slightly; veterans receiving readjustment allowances and railroad beneficiaries, on the other hand, were far above the number a year earlier.

Insured unemployment under the State, railroad, and veterans' unemployment insurance programs, as represented by claims filed for unemployment benefits or waiting-period credit, reached a peak for 1946 of more than 3½ million a week in March, continued above the 3 million mark until mid-July (except for a slight drop in the last week of June), and moved downward almost continuously from then on. In the week ended October 19, insured unemployment fell below the 2 million level for the first time since the week of November 17, 1945, and remained below that level during the rest of October and throughout November. In November, half the insured unemployment occurred among veterans; commercial and industrial workers covered under State unemployment insurance laws comprised 47 percent of the total, and railroad workers, 3 percent. A year earlier, veterans made up only 17 percent of the total, while more than 80 percent of the insured unemployment occurred among workers covered by State programs. Averages for the weeks ended in No-

<sup>1</sup> For an analysis of the 1946 amendments to the Railroad Retirement Act, see the *Bulletin* for December 1946, pp. 23-33.

vember, however, indicate that insured unemployment declined more among veterans as compared with October levels than it did among commercial and industrial workers, while unemployment among railroad workers increased. Estimates of unemployment insured under the three programs for the weeks ended in November 1945 and in October and November 1946 are shown below.

Week ended—	Insured unemployment (in thousands)			
	All programs	State unemployment insurance	Veterans' unemployment allowances	Railroad unemployment insurance
1945

30.....	1,912	916	925	71
Average.....	1,844	869	915	60

Insured unemployment under the three programs declined 8 percent from October, on an average, and was also somewhat less than in November 1945. Compared with October levels, averages for weeks ended in November declined about 5 and 12 percent under the State and veterans' programs, respectively, and rose 7 percent under the railroad program. Railroad insured unemployment in the last week of November was greater than in any week since the week ended June 8.

## Recent Trust Fund Developments

The Treasury started a program of debt retirement in March 1946 and each month since then has retired a portion of the debt. The reduction in the debt has had an effect both on the rate of interest borne by special obligations issued to the two social security trust funds and on the propor-

tion of the debt which is held by them. The investment operations of the two trust funds during this recent period of debt reduction are briefly reviewed below.

### Sums Invested

In the 9 months from March 1 through November 30, the two social security trust funds together acquired a net total of \$890 million of Government securities (table 3). This sum was considerably below the \$1.5 billion and \$1.9 billion of investments purchased during the corresponding 9 months of 1945 and 1944. The net sums available for investment in a given period consist of that portion of the funds' receipts which is not needed to meet current expenditures. For the two funds, the combination in 1946 of lower receipts and higher expenditures lessened the amount available for investment.

The unemployment trust fund showed the effects of reconversion during this period to a greater degree than the old-age and survivors insurance trust fund. From March through November a net amount of only \$106 million of Government obligations was acquired on behalf of the former, while \$784 million was acquired for the old-age and survivors insurance trust fund. In contrast, \$1.1 billion in new securities had been added to the unemployment trust fund portfolio in the corresponding period of 1944, and another \$675 million in 1945. Investments of the old-age and survivors insurance trust fund had increased by \$809 million

during the same 9 months of 1944 and by \$850 million in those of 1945. Thus, additional securities acquired for the account of the unemployment trust fund declined in 1946 by 84 percent in comparison with the comparable period in 1945, while the amount of new securities added to the old-age and survivors insurance trust fund dropped by 8 percent.

The unemployment trust fund had been appreciably affected by the layoffs and shifts in employment following the end of the fighting in Europe and in Japan. The States were obliged to withdraw from their accounts larger and larger amounts for the payment of unemployment insurance benefits; and since monthly deposits in the fund were insufficient to meet the heavy monthly withdrawals, some of the fund's investments had to be liquidated. Although monthly withdrawals reached their peak in February 1946 and have been declining since that time, the total withdrawn from March through November was greater than the amounts deposited by the States. That the fund was able to show an excess of new investments over redemptions during this period was due largely to the fact that deposits in November were approximately \$100 million more than withdrawals, thus permitting the purchase of \$100 million of Government securities. This purchase accounted for 94 percent of the net acquisitions during the 9-month period. By November 30 the unemployment trust fund, which since January 1, 1943, had acquired and held more Government securities than the old-age and survi-

vors insurance trust fund, had \$265 million less in investments than the other fund.

The decline in acquisitions of the old-age and survivors insurance trust fund from 1945 to 1946 was largely due to the considerably smaller volume of contributions received in the first half of 1946, which were based on pay rolls in the last quarter of 1945 and in the first quarter of 1946.

At the end of November, the two trust funds together held Government securities totaling \$15.4 billion. This figure represented 5.9 percent of the total interest-bearing debt of \$260.9 billion on that date. At the beginning of March, the two trust funds held investments of \$14.5 billion, or 5.2 percent of the interest-bearing debt of \$277.9 billion. In spite of the fact that the two funds absorbed less of the debt during this period than in the comparable 9 months of the 2 preceding years, the reduction during the period in the size of the public debt raised the proportion of the debt held by the funds from 5.2 percent to 5.9 percent.

The interest-bearing public debt reached its peak at the end of Febru-

ary 1946, when it stood at \$277.9 billion. The Treasury started its debt-reduction program in March and has since retired a portion of the debt each month by not refunding a part of the securities that have matured or been called for payment. By the end of November, net retirement during this period amounted to almost \$17 billion, and the Treasury's cash balances had declined from \$26.0 billion to \$6.7 billion.

Of the \$15.4 billion of Government securities held by the two trust funds at the end of November, \$13 billion consisted of special obligations. The total amount of all types of special issues outstanding at that time was \$24.3 billion, of which the two social security trust funds held 53 percent. Other trust funds held most of the remaining 47 percent; the national service life insurance fund held \$5.6 billion or 23 percent, the civil-service retirement and disability fund, \$2.4 billion, and the Government life insurance fund, \$1.2 billion.

#### Interest Rates

The debt-retirement program has affected the average interest rate borne by the public debt. The computation of this average interest rate determines the rate carried by new special obligations issued to the two trust funds. The Social Security Act requires that such special obligations shall bear interest at a rate equal to the average rate of interest, computed as of the end of the calendar month next preceding the date of their issue, borne by all interest-bearing obligations of the United States; if such average rate is not a multiple of  $\frac{1}{8}$  of 1 percent, the rate of interest on such special obligations must be the multiple of  $\frac{1}{8}$  of 1 percent next lower than such average rate. Because a sizable proportion of the debt retired or maturing has consisted of securities bearing relatively low interest rates—less than 1 percent—the average interest rate on the debt as a whole has gone up somewhat in recent months (table 5). On February 28, 1946, when the debt reached its peak, the computed average interest rate was 1.972 percent. As the debt was reduced, the average rate rose; by the end of July it had risen to slightly more than 2 percent and reached 2.046 percent by the end of

Table 5.—Average interest rate on social security trust fund investments and interest-bearing public debt at end of specified period, 1936-46

October.....	2.036	2.047	1.937
November.....	2.046	2.047	1.938

November. After the average rate had risen above the 2-percent level, new special obligations issued to the two trust funds bore interest at 2 percent, instead of the  $1\frac{1}{8}$ -percent rate which had been in effect since April 1943.

At the end of 1940, special obligations were being issued at a rate of 2.5 percent; the average rate on the entire debt was 2.566 percent, and the debt itself totaled \$44 billion. Within 2 years the debt had increased to \$107 billion and the average rate thereon had dropped to 2.059 percent, with a corresponding decrease to 2 percent in the interest earned by new special issues. By the end of 1944 the debt had further increased to \$229 billion, the average rate had further declined to 1.919 percent, and new special issues earned only  $1\frac{1}{8}$  percent. In January 1945 the average rate began to rise, though the debt itself was still growing, and by the end of the year it was up to 1.965 percent. The increase, however, was not large enough to cause a corresponding rise in the interest rate on special obligations, since it did not go up by as much as  $\frac{1}{8}$  of 1 percent.

In the 4 months August–November during which special obligations to the social security trust funds were

issuable at 2 percent, the two trust funds acquired \$545 million of 2-percent special certificates of indebtedness, of which the old-age and survivors insurance fund purchased \$290 million and the unemployment trust fund the remainder. Whenever redemptions have become necessary during these months, 1½-percent certificates of indebtedness acquired earlier have been redeemed.

While the 2-percent special obligations held by the two trust funds at the end of November represented only a small fraction of their total investment holdings, the proportion will probably increase considerably. The two funds at that time held \$10 billion of 1½-percent certificates of indebtedness which will mature June 30, 1947. The customary practice has been to use the proceeds of such maturing securities to purchase new certificates maturing a year later. If this procedure is followed, all 1½-percent certificates held by the funds at the end of the current fiscal year may be expected on maturity to be replaced by certificates bearing the higher interest rate of 2 percent, provided the average interest rate on the public debt still continues above 2 percent.

At the end of November the unemployment trust fund held certificates of indebtedness maturing June 30, 1947, in the amount of \$6.9 billion, which represented over 90 percent of the fund's total investments. The old-age and survivors insurance trust fund held \$3.6 billion of such certificates, representing 47 percent of its total investments. Thus, a higher rate on all special certificates held would have a greater effect on the over-all interest rate of unemployment trust fund investments than on that of old-age and survivors insurance trust fund investments.

At the end of November, 2-percent certificates represented only a minor portion of unemployment trust fund investments and had affected only slightly the average interest rate of all of the fund's investments. This average had already increased somewhat since August, however, when the fund began to acquire 2-percent special certificates. This rise was a continuation of an increase which began in June 1945 as a result of the acquisition from time to time of sizable amounts of 2½-percent Treasury

bonds. On June 1, 1945, the average interest rate on all of the fund's holdings was 1.910 percent. The acquisition of \$150 million of long-term 2½-percent regular Treasury bonds during that month boosted the average interest rate to 1.923 percent. Again, in December of that year, the acquisition of another \$150 million of 2½-percent bonds raised the average interest rate to 1.934 percent at the end of 1945. In the first 7 months of 1946, the rate rose to only 1.935 percent. From August through November, however, the fund acquired \$255 million of 2-percent certificates of indebtedness, while \$50 million of its 1½-percent certificates was being redeemed; this caused an increase in the average rate to 1.938 percent.

The old-age and survivors insurance trust fund held \$290 million of 2-percent special certificates of indebtedness at the end of November. The average rate of interest on this fund's holdings had been declining

since 1939, when the interest on special obligations issued to it was first linked to the average rate on the entire public debt instead of being 3 percent, as prescribed by statute up to 1940. In spite of the fact that the average rate on the public debt halted its decline in December 1944 and thereafter moved upward, the over-all interest rate on this fund's investments continued to decline, chiefly because of the steadily increasing proportion of 1½-percent and 2-percent short-term certificates in the fund's portfolio. At the end of 1944, short-term certificates represented only 11 percent of the fund's total investments, but by November 30, 1946, this proportion had grown to 50 percent, and the average interest rate had declined to 2.047 percent. The average rate on the public debt, however, had risen by that time to 2.046 percent.

Since the creation of the two trust funds, old-age and survivors insur-

<sup>1</sup> Represents contributions of employees and employers in employments covered by old-age and survivors insurance.

<sup>2</sup> Represents employee and Government contributions to the civil-service, Canal Zone, and Alaska Railroad retirement and disability funds; in recent years Government contributions are made in July for the entire fiscal year.

<sup>3</sup> Represents deposits in State clearing accounts of contributions plus penalties and interest collected from employers and, through April 1946, contributions from employees in 4 States; employee contributions beginning May 21, 1946, in California and

beginning July 1, 1946, in Rhode Island are deposited in the respective State sickness insurance funds. Data reported by State agencies; corrected to Dec. 18, 1946.

<sup>4</sup> Represents taxes paid by employers under the Federal Unemployment Tax Act.

<sup>5</sup> Represents July contributions of \$21.5 million from employees, and contributions for fiscal year 1946-47 of \$221.5 million from the Federal Government and of \$1.2 million from the District of Columbia for certain District government employees.

Source: *Daily Statement of the U. S. Treasury*, unless otherwise noted.

ance trust fund investments as a whole have always borne a higher rate of interest. The average rate on the fund's investments declined fairly steadily from a high of 3 percent to the November 30 level of 2.047 percent. Average earnings on unemployment trust fund investments dropped from the 2.5-percent peak to a low of 1.888 percent, then rose to the November 1946 level of 1.938 percent. The average rates for the two funds have tended to approach one another and are closer together now than ever before.

### Investment Procedures

The investment procedures followed in the case of the old-age and survivors insurance trust fund differ somewhat from those used for the unemployment trust fund. New securities for the former are acquired only in the last month of each quarter, whereas acquisitions for the account of the unemployment trust fund are made monthly, if uninvested moneys are available. The procedures for acquisition of new investments in the case of the old-age and survivors insurance fund are determined to some extent by the procedures relating to insurance contributions. Under permanent appropriation, sums equivalent to 100 percent of contributions under the Federal Insurance Contributions Act are appropriated to the fund as such contributions are received by the Treasury. Because of the due date for remission of employer and employee taxes by employers, there is a definite monthly collection pattern within each quarter; collections in the second month normally account for at least 80 percent of the collections in the entire quarter, the first month's collections about 15 percent or more, and the third month's only around 5 percent.

The managing trustee of the old-age and survivors insurance trust fund invests that part of contributions appropriated to the fund which in his judgment is not required to meet current expenditures for benefits and administration. If at the end of the first month of a quarter there is a small margin left for investment, it is retained in the cash accounts maintained in the fund: the chief disbursing officer's account from which benefit payments are made, and the appro-

priations account from which the investments are made. In recent years, small redemptions frequently have been necessary in the first month of a quarter in order to meet immediate cash requirements.

During the second month of the quarter the bulk of the normally large excess of receipts over expenditures goes into the appropriations account, and investments from this account are nearly always made during the third month. Benefit payments usually exceed contributions in the last month of a quarter, and the cash accounts are drawn down to meet these payments. The size of the appropriations account fluctuates considerably from month to month, while the other cash account, the chief disbursing officer's account, remains relatively stable by comparison (table 8). The balance in the appropriations account rises and falls as contributions are received and investments made. The typical balance in

the chief disbursing officer's account has risen steadily in the last few years, paralleling the rise in benefit payments.

Interest on regular obligations held by the old-age and survivors insurance trust fund is received by the fund at the time interest becomes payable on the particular series held. Interest on special obligations is payable on June 30 and December 31.

While the receipts of the unemployment trust fund also follow a quarterly pattern, investments usually are made monthly, if moneys are available. During 1943 and 1944 and the first half of 1945, new securities were acquired each month. While an unexpended cash balance is also maintained in this fund, it need not be as large as that of the old-age and survivors insurance trust fund.

The unemployment trust fund, which is composed of 51 separate State accounts and the railroad unemployment insurance account, is in-

## Recent Publications in the Field of Social Security\*

### Social Security Administration

*Annual Report of the Federal Security Agency; Section 6, Social Security Board, 1946.* Washington, U. S. Govt. Print. Off., 1946, pp. 423-533. 25 cents for Section 6.

This final report to Congress by the Social Security Board outlines operations administered by the Board during the fiscal year 1945-46 and the Board's views and recommendations on means for attaining the objectives of social security through provision of a comprehensive system of social insurance and public assistance, modifications of particular programs, and establishment of additional provisions. A final section summarizes social security legislation enacted after the close of the fiscal year. The appendix includes tables on administrative and fiscal operations and on program operations in each State. A summary of the Board's recommendations appeared in the December issue of the BULLETIN (pp. 3-7).

**BUREAU OF OLD-AGE AND SURVIVORS INSURANCE. ANALYSIS DIVISION.** *Old-Age and Survivors Insurance Program Analysis. Report I, Insurance Status.* Baltimore: The Bureau, 1946. 92 pp. Processed.

An analysis of data derived from the Bureau's continuous work-history sample of persons with wage credits under the program. Describes the extent to which workers have met requirements for insured status and the factors responsible for the failure of those workers with wage credits to be insured. Limited free distribution; apply to the Analysis Division, Bureau of Old-Age and Survivors Insurance, Social Security Administration, Baltimore 2, Md.

**BUREAU OF PUBLIC ASSISTANCE.** *Characteristics of State Plans: Old-Age Assistance, Aid to the Blind, Aid to Dependent Children.* Washington: The Bureau, 1946. 103 pp. (Informational Service Circular No. 62.) 35 cents.

\*The inclusion of prices of publications in this list is intended as a service to the reader, but any orders must be directed to publishers or booksellers and not to the Social Security Administration or the Federal Security Agency. Federal publications for which prices are listed should be ordered from the Superintendent of Documents, U. S. Government Printing Office, Washington 25, D. C.

Charts showing, by State, important features of individual State plans for each category.

**BUREAU OF PUBLIC ASSISTANCE.** *Individual and Group Conferences as Methods of Supervision, New York City Department of Public Welfare.* Washington: The Bureau, 1946. 88 pp. Processed. (Current Practices in Staff Training. Illustrations from State Public Assistance Agencies IV.)

Presents material on individual and group supervisory conferences as carried out in the New York City Welfare Department.

### General

"The Aging Population." *Fortune*, New York, Vol. 34, Dec. 1946, pp. 250-254. \$1.

Comments on the increasing proportion of aged in our population and the implications of this change in the age structure.

**ALTMAYER, ARTHUR J.** "Social Security in a Postwar World." *Public Welfare*, Chicago, Vol. 4, Nov. 1946, pp. 242-245 f. 50 cents.

Outlines measures needed to extend, expand, and improve our social insurance and public assistance programs.

**AMERICAN FEDERATION OF LABOR.** *Social Insurance; Declaration of the 65th Convention . . . Unanimously Passed at Chicago, Illinois, October 17, 1946.* Washington: The Federation, 1946. 4 pp. Processed.

The resolution favors the adoption of a comprehensive social insurance program such as is embodied in the Wagner-Murray-Dingell bill.

**ARCE, JOSE.** *Seguridad Social en la Argentina.* Buenos Aires: Editorial Losada, S. A., 1945. 172 pp. (Academia de Ciencias Económicas. Ediciones Especiales No. 6.)

Discusses the content, administration, and financing of social insurance and assistance programs in Argentina and comments on future developments.

*The Economic Almanac for 1946-47; A Handbook of Useful Facts About Business, Labor and Government in the United States and Other Areas.* New York: National Industrial Conference Board, 1946. 424 pp.

Includes data on national income, cost of living and consumption, the labor force, and public finance.

**FUSS, HENRI.** "Social Security in Belgium." *Annals of the American Academy of Political and Social Science*, Philadelphia, Vol. 247, Sept. 1946, pp. 117-124. \$2.

A survey of legislation, effective January 1, 1945, relating to old-age, invalidity and sickness, and unemployment insurance and family allowances.

**GOODRICH, LELAND M., and HAMBRO, EDWARD.** *Charter of the United Nations; Commentary and Documents.* Boston: World Peace Foundation, 1946. 413 pp. \$2.50.

Relevant documents and commentary.

**MULLIKEN, OTIS E.** "The Foreign Social Policy of the United States." *Department of State Bulletin*, Washington, Vol. 15, Dec. 1, 1946, pp. 1011-1020. 10 cents.

Defines the foreign social policy of the United States as "the development of cooperative relations among people—the development of mutual understanding—the advancement of human welfare," and describes Government activities and policies undertaken to achieve this goal.

**NATIONAL CATHOLIC WELFARE CONFERENCE.** *Seminar on Negro Problems in the Field of Social Action.* Washington: The Conference, 1946. 36 pp.

The conference considered the economic life, civic rights, housing, and social and health services of the Negro. Among the recommendations developed were several relating to social security expansion, child welfare services, and increased social and health facilities.

**O'GRADY, JOHN.** *Catholic Charities and Social Security.* Washington: National Conference of Catholic Charities, 1946. 34 pp. 25 cents.

Four statements presenting a philosophy and program for child welfare, public assistance, old-age and survivors insurance, and health.

**PERU. MINISTERIO DE SALUD PUBLICA Y ASISTENCIA SOCIAL.** *Memoria del Ministro de Salud Publica y Asistencia Social, Doctor Constantino J. Carvallo, Julio 1941-Julio 1945.* Lima: 1945. 680 pp.

A 4-year report by the Minister of Public Health and Social Assistance. The appendix contains laws, decrees, and regulations issued during the period.

"Social Welfare in the 79th Congress." *The Compass*, New York, Vol. 28, Nov. 1946, pp. 3-19. \$1 a year.

Includes Reorganization of the Federal Security Agency, by Arthur J. Altmeyer; Report on the 79th Con-

gress, by Elizabeth Wickenden; Public Assistance Amendments to the Social Security Act, by Jane M. Hoey; What the 79th Congress Did for Children's Services, by Katharine F. Lenroot; Health Insurance—A National Political Issue, by Joseph H. Louchheim.

"The Twenty-eighth (Maritime) Session of the International Labour Conference, Seattle, June 1946." *International Labour Review*, Montreal, Vol. 54, July-Aug. 1946, pp. 1-28. 50 cents.

A general summary of the work of the Conference, which considered, among other subjects, a proposed social security program for seafarers.

### Old-Age and Survivors Insurance

"Conference on Pension and Profit Sharing Plans." *Eastern Underwriter*, New York, Vol. 47, Dec. 6, 1946, pp. 8, 14, 16. 25 cents.

Summaries of papers presented at a conference on employee pension plans sponsored by the U. S. Chamber of Commerce.

"How the Amount of Annuity is Affected by the 1946 Amendments." *Monthly Review* (Railroad Retirement Board), Chicago, Vol. 7, Nov. 1946, pp. 206-210.

Outlines the various ways in which the amount of an annuity may be affected by the recent amendments to the Railroad Retirement Act.

"Pension and Profit Sharing Plan Expansion." *Journal of Commerce and Commercial*, New York, Vol. 208, May 29, 1946, Second Section, 40 pp. \$1.

A symposium which includes papers on plan construction, experience, and trends in legislation and taxation.

"Total of Monthly Death Benefits for Families of Deceased Workers." *Monthly Review* (Railroad Retirement Board), Chicago, Vol. 7, Nov. 1946, pp. 213-217.

Presents a series of tables showing, for typical cases, monthly benefits available for the survivors of an insured railroad worker.

### Employment Security

CALIFORNIA. STATE DEPARTMENT OF EMPLOYMENT. *Characteristics of California Unemployment Insurance Claimants With Benefit Years Ending in 1943 and 1944*. Sacramento: The Department, 1946. 38 pp. Processed. (Report 365 #3.)

CLIFFE, FRANK B. "Administration of Unemployment Compensation." *American Economic Security* (Chamber of Commerce of the

U. S. A.), Washington, Vol. 3, Oct.-Nov. 1946, pp. 8-14. \$1 a year.

Discusses typical problems of State administrators and controllers in administering unemployment insurance.

HABER, WILLIAM. "Objectives and Opportunity of the Public Employment Service." *State Government*, Chicago, Vol. 19, Nov. 1946, pp. 273-276 f. 35 cents.

Identifies the essential functions of employment service as counseling, placement, and provision of special services to veterans, personnel assistance to industry and labor, labor-market information, and aid in community planning, and discusses problems of Federal-State administration.

ILLINOIS. DEPARTMENT OF LABOR. DIVISION OF PLACEMENT AND UNEMPLOYMENT COMPENSATION. *Unemployment Compensation During the War Years*. Chicago: The Division, 1946. 66 pp. Processed.

Describes the trends in unemployment insurance in Illinois from April 1, 1940, through September 30, 1945, with emphasis on the extent to which the objectives of the State law were achieved.

KANSAS. STATE LABOR DEPARTMENT. UNEMPLOYMENT COMPENSATION DIVISION. *Job Insurance in Kansas*. Topeka: The Division, 1946. 11 pp. Explanation of the benefit provisions of the Kansas unemployment insurance law.

LOYSEN, MILTON O. "The New York 'Experience Rating' Plan in Action." *American Economic Security* (Chamber of Commerce of the U. S. A.), Washington, Vol. 3, Oct.-Nov. 1946, pp. 3-8. \$1 a year.

The Executive Director of the Division of Placement and Unemployment Insurance, New York State Department of Labor, explains the main features of the plan and discusses its operation.

LOYSEN, MILTON O. "Reform of Unemployment Compensation Administrative Finance." *State Government*, Chicago, Vol. 19, Nov. 1946, pp. 277-279 ff. 35 cents.

Argues that the present financing of unemployment insurance administrative costs by the Federal Government has been unsatisfactory and should be replaced by complete financing from State sources.

NEW YORK STATE. DEPARTMENT OF LABOR. DIVISION OF INDUSTRIAL RELATIONS, WOMEN IN INDUSTRY AND MINIMUM WAGE. *Domestic Service Employment in New York State*. Albany: The Division, 1946. 40 pp. Processed.

A survey of prewar and current ties.

wages and working conditions with comments on proposals for solving domestic service problems.

A statistical report.

"Spreading the Cost; Principle of Unemployment Insurance Now a Recognized Need in Our Economy." *Industrial Bulletin* (New York State Department of Labor), New York, Vol. 25, Sept. 1946, pp. 4-5.

One of a series of articles in this issue of the *Industrial Bulletin* on the role of unemployment insurance in New York State. Other articles describe various activities performed by the Division of Placement and Unemployment Insurance, especially the use of the employment data developed through unemployment insurance administration.

### Public Welfare and Relief

BONDY, ROBERT. "National Social Welfare Assembly's Program." *Public Welfare*, Chicago, Vol. 4, Dec. 1946, pp. 271-274. 50 cents.

Information on the membership, organization, and activities of the National Social Welfare Assembly which came into existence in December 1945, when the National Social Work Council voted to reorganize.

CASSATT, ANNA A. *Recording in Public Welfare*, Raleigh, N. C.: State Board of Public Welfare, 1946. 48 pp. (Informational Bulletin No. 7.) Formulates policies and procedures for case recording in the North Carolina Board of Public Welfare.

CHILD WELFARE LEAGUE OF AMERICA, INC. *Daytime Care; A Partnership of Three Professions*. New York: The League, 1946. 31 pp. 35 cents. A statement of principles for the guidance of personnel engaged in the daytime care of children developed at a conference of representatives from the medical, teaching, and social work professions.

FLEMING, MAE. "Family Allowances in Canada; Interim Report on Effects." *Canadian Welfare*, Ottawa, Vol. 22, Dec. 1, 1946, pp. 11-12. 25 cents.

Finds that the program has resulted in an improved diet, more adequate clothing, increased school attendance, more health care, and expansion of recreational and cultural opportunities.

HART, ROSELLA M. "The County Administrator and Field Supervision." *Public Welfare*, Chicago, Vol. 4, Nov. 1946, pp. 253-255 f. 50 cents.

Discusses the function of the field supervisor in supervising and interpreting policy to the county welfare staff.

HOEY, JANE M. "Amendments to Public Assistance Titles of the Social Security Act." *Public Welfare*, Chicago, Vol. 4, Dec. 1946, pp. 275-279. 50 cents.

Analysis and evaluation of the recent amendments.

HURLIN, RALPH G. *Operation Statistics of Selected Family Casework Agencies, 1945; With Trend Data for the Period 1936 to 1945*. New York: Russell Sage Foundation, 1946. 30 pp. 25 cents.

Comparative statistics for 60 private welfare agencies.

"Old Age." *Fortune*, New York, Vol. 34, Dec. 1946, pp. 123-125 ff. \$1.

Portrait of life at a home for the aged, owned by the Community Service Society of New York.

OOSTERHOF, WILLIS M. "Medical Care Under Public Assistance in Michigan." *Michigan Welfare Review*, Lansing, Vol. 3, Apr.-June 1946, pp. 1-4.

Information based on a survey of 10 counties.

SCOTLAND. COMMITTEE ON HOMELESS CHILDREN. *Report*. Edinburgh: H. M. Stationery Office, 1946. 41 pp. (Cmd. 6911.) 9d.

A survey of existing methods of child care, with recommendations for centralizing responsibility in one department; emphasizes the need for individual attention for each child.

### Health and Medical Care

*American Hospital Directory*, 1946. Chicago: American Hospital Association, 1946. 685 pp. \$7.50.

Directory of hospitals in the United States and its possessions and in Canada, giving for each hospital its location, size, type, facilities, and personnel. Includes data on hospital associations, professional schools, national and State agencies, and a survey of civilian hospital facilities.

BOONE, JOEL T. "New Horizons in Industrial Health and Welfare; Progress in Industrial Health." *Journal of the American Medical Association*, Chicago, Vol. 132, Nov. 30, 1946, pp. 755-758. 25 cents.

The author, who is director of the medical survey of health conditions in coal-mining areas, comments on some of the survey findings.

BRITISH MEDICAL ASSOCIATION. *A Charter for Health*. London: George Allen & Unwin, Ltd., 1946. 95 pp. 6s.

A statement of "the basic factors of health and of the basic human needs that must be satisfied if the highest possible level of physical and mental fitness throughout the community is to be reached and maintained."

GRAY, K. G. "Canadian and American Health Insurance Plans." *Canadian Journal of Economics and Political Science*, Toronto, Vol. 12, Nov. 1946, pp. 505-509. \$1. Outlines proposals in both countries.

GREAT BRITAIN. HOME OFFICE. COMMITTEE ON ALTERNATIVE REMEDIES. *Final Report*. London: H. M. Stationery Office, 1946. 72 pp. (Cmd. 6860.) 1s. 6d.

Reviews present provisions under the National Insurance and National Insurance (Industrial Injuries) bills for compensation for injuries resulting from employment and nonemployment causes and makes recommendations for coordination of benefits and damages.

INDIA. HEALTH SURVEY AND DEVELOPMENT COMMITTEE. *Report*. Delhi: Published by the Manager of Publications, and printed by the Manager, Government of India Press, 1946. 4 vols.

A detailed report on health conditions in India and the Committee's recommendations for health programs to include free medical service financed through general taxation.

McDAVITT, T. V. "Voluntary Prepayment Medical Care Plans." *Journal of American Insurance*, Chicago, Vol. 23, Dec. 1946, pp. 28-31. 25 cents.

Development of, and arguments favoring, voluntary plans.

MACNALT, ARTHUR S., and MELLOR, FRANKLIN W. *Health Recovery in Europe*. London: Frederick Muller Ltd., 1946. 180 pp. \$2.15.

A survey of health conditions in Europe and of national and international agencies, both official and voluntary, engaged in health work.

MARTIN, H. E. "The Transition to a National Health Service with Particular Reference to the Assimilation of General and Consultant Medical Practice." *Public Administration*, London, Vol. 24, Autumn 1946, pp. 181-188. 4s.

Discusses the characteristics of medical practice during the transition period.

"National Health Bill for Scotland." *British Medical Journal*, London, No. 4480, Nov. 16, 1946, pp. 744-747. 1s. 6d.

Summary of the proposed health bill for Scotland which follows, in general, the pattern adopted in England.

"The National Health Service: Report of the Negotiating Committee." *British Medical Journal Supplement*, London, No. 4480, Nov. 16, 1946, pp. 124-130. 1s. 6d.

The report of the Committee, representing the medical profession, summarizes the main provisions of the National Health Service Act and examines them in relation to the principles of medical care formulated by the Committee. Other articles in this issue of the *Journal* discuss the participation of the medical profession in the new service.

REED, LOUIS S. "Conclusion of a Survey of Blue Cross and Medical Service Plans." *Medical Annals of the District of Columbia*, Washington, Vol. 15, Nov. 1946, pp. 565-568. 25 cents.

A preliminary statement on the conclusions reached by the U. S. Public Health Service as to the extent to which voluntary hospital and medical service plans are meeting, or are potentially capable of meeting, the Nation's health needs.

TAFT, ROBERT A. "Taft Maps Offensive Against Nationalized Medicine." *Medical Economics*, Rutherford, N. J., Vol. 24, Nov. 1946, pp. 81-99. 25 cents.

Explains his reasons for opposing the Wagner-Murray-Dingell health bill and outlines the provisions of his bill for medical assistance for low-income groups.

WALCH, J. WESTON. *Complete Handbook on State Medicine*. Portland, Maine: The Author, 1946. 170 pp. \$2.50.

A debater's handbook.

WILLIAMS, PHILIP F. "Maternal Welfare and the Negro." *Journal of the American Medical Association*, Chicago, Vol. 132, Nov. 16, 1946, pp. 611-614. 25 cents.

An inquiry into the causes of the high maternal and infant mortality rate among Negroes.

WILSON, ELIZABETH W. "Characteristics of Compulsory Health Insurance." *Journal of Gerontology*, Springfield, Ill., Vol. 1, Oct. 1946, pp. 457-463. \$1.50.

Discussion of common problems in health insurance systems and their solutions in various countries.

The SOCIAL SECURITY BULLETIN is published monthly under authority of Public Resolution No. 57, approved May 11, 1922 (42 Stat. 541), as amended by section 307, Public Act 212, 72d Congress, approved June 30, 1932. This publication is approved by the Director of the Bureau of the Budget.

The BULLETIN is prepared in the Periodic Publications Section, under the supervision of Jessica H. Barr, Chief of the Division of Publications and Review. It reports current data on operations of the Social Security Administration and the results of research and analysis pertinent to the social security program, and is issued primarily for distribution to agencies directly concerned with the administration of the Social Security Act. Statements in articles do not necessarily reflect final conclusions or official policies of the Social Security Administration. Any part of this publication may be reproduced with appropriate credit to the BULLETIN.

The BULLETIN is for sale by the Superintendent of Documents, U. S. Government Printing Office, Washington 25, D. C., to whom all purchase orders, with accompanying remittance, should be sent. Beginning with the January 1946 issue, the annual subscription is \$1.50 in the United States, Canada, and Mexico and \$2.25 in all other countries; price of single copy, 15 cents. For all issues before 1946, the price of single copies remains 20 cents.

Issues of the SOCIAL SECURITY YEARBOOK, an annual calendar-year supplement to the BULLETIN, are sold separately by the Superintendent of Documents as follows: 1939, 50 cents; 1940 and 1941, 70 cents each; 1942, 50 cents; 1943, out of print; and 1944, 50 cents.
